**Research of Dental Clinic's situation
in pandemic of COVID-19**

Inside a treatment room

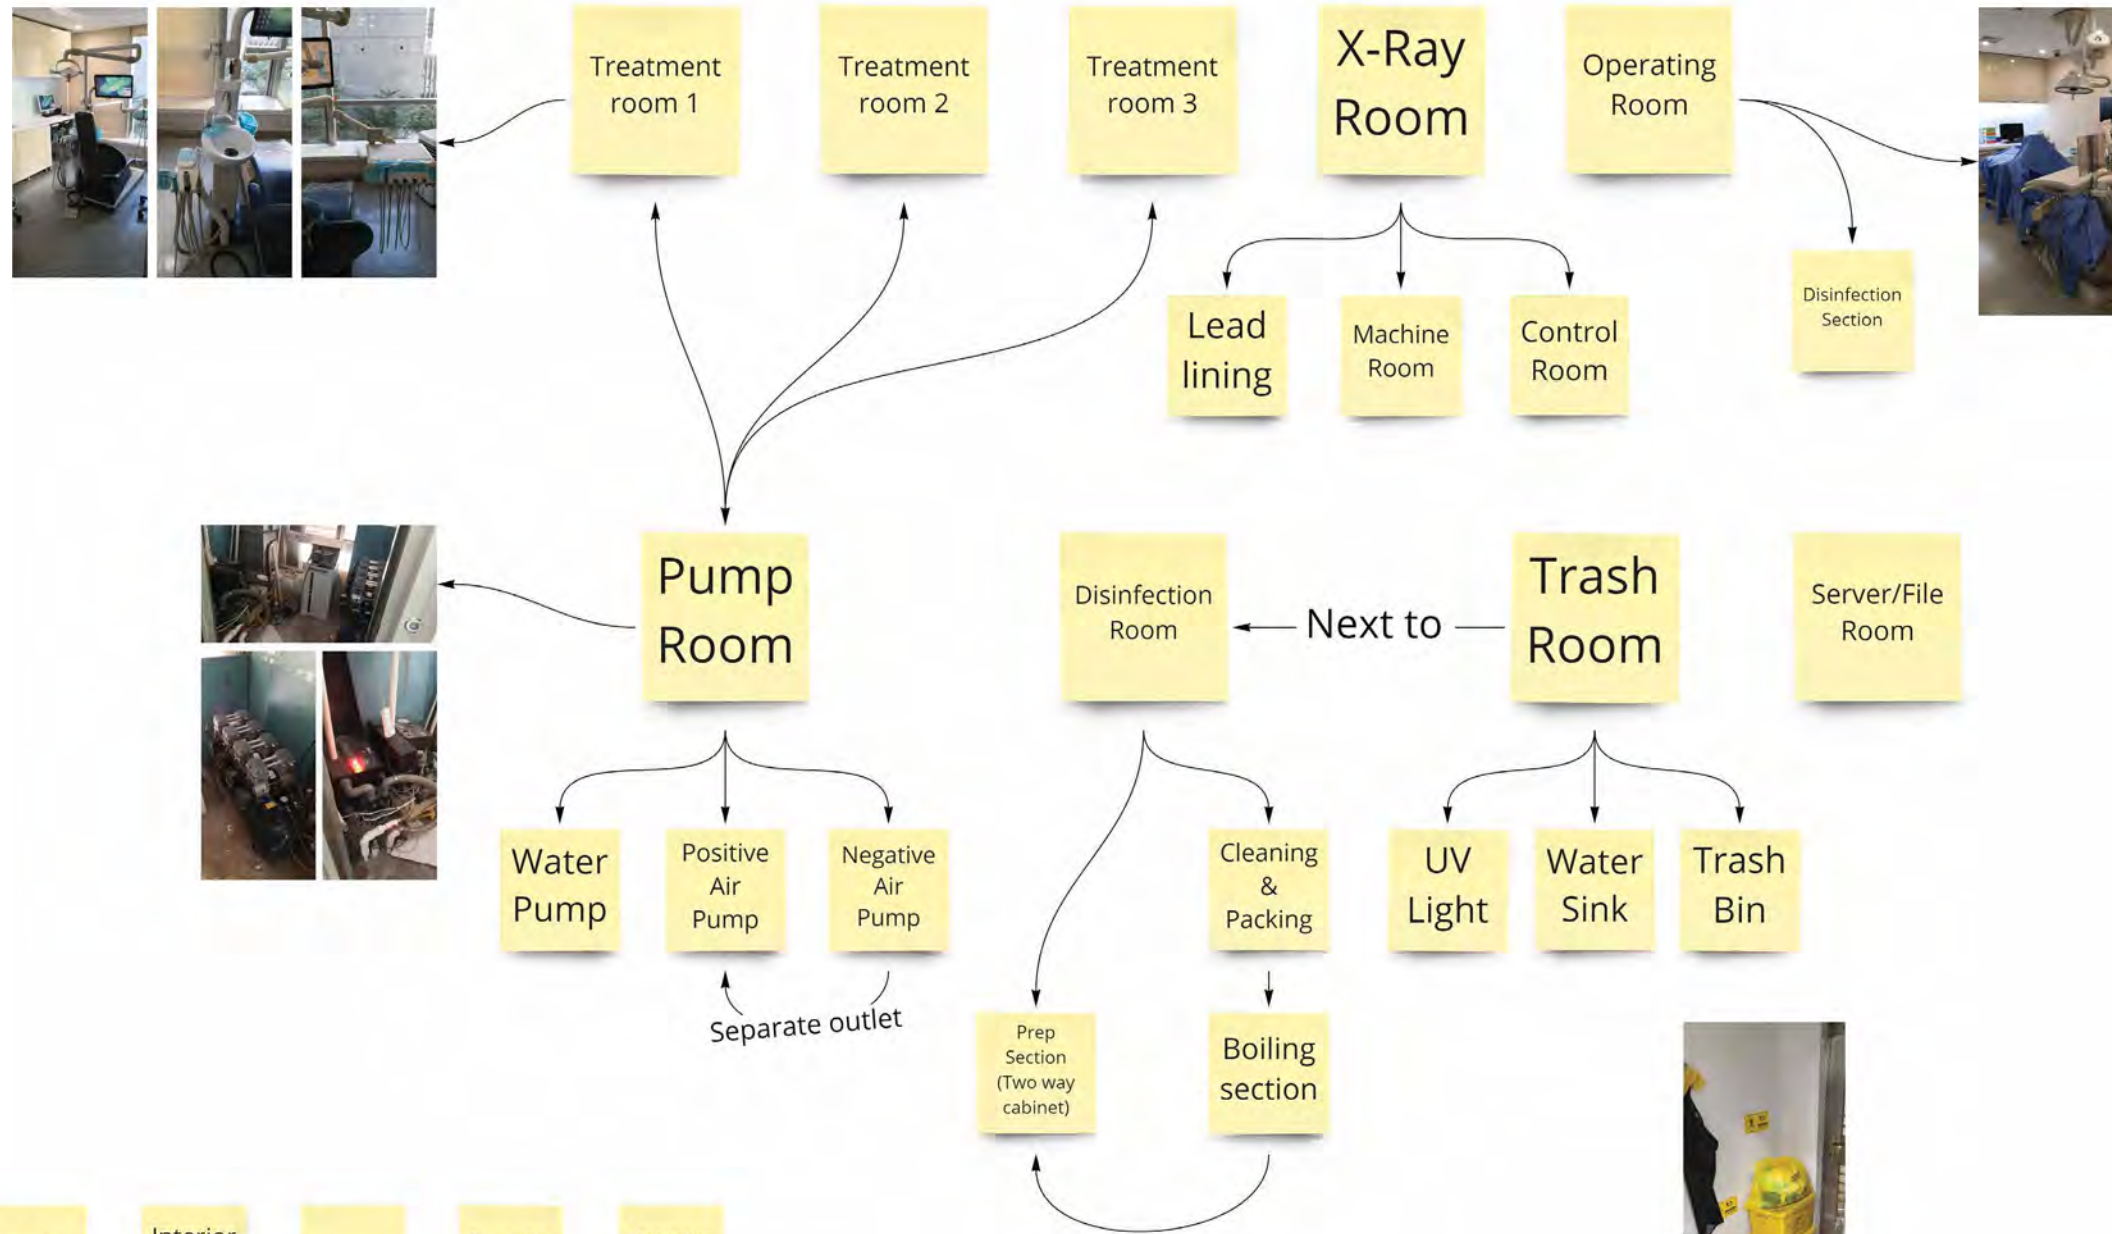

Underground piping:

- Clean water
- Sewage
- Electricity
- Positive pressure Air (Clean)
- Negative pressure air
- Data wire

Piping are supposed to be cleaned annually
Hard to achieve, hard to expand

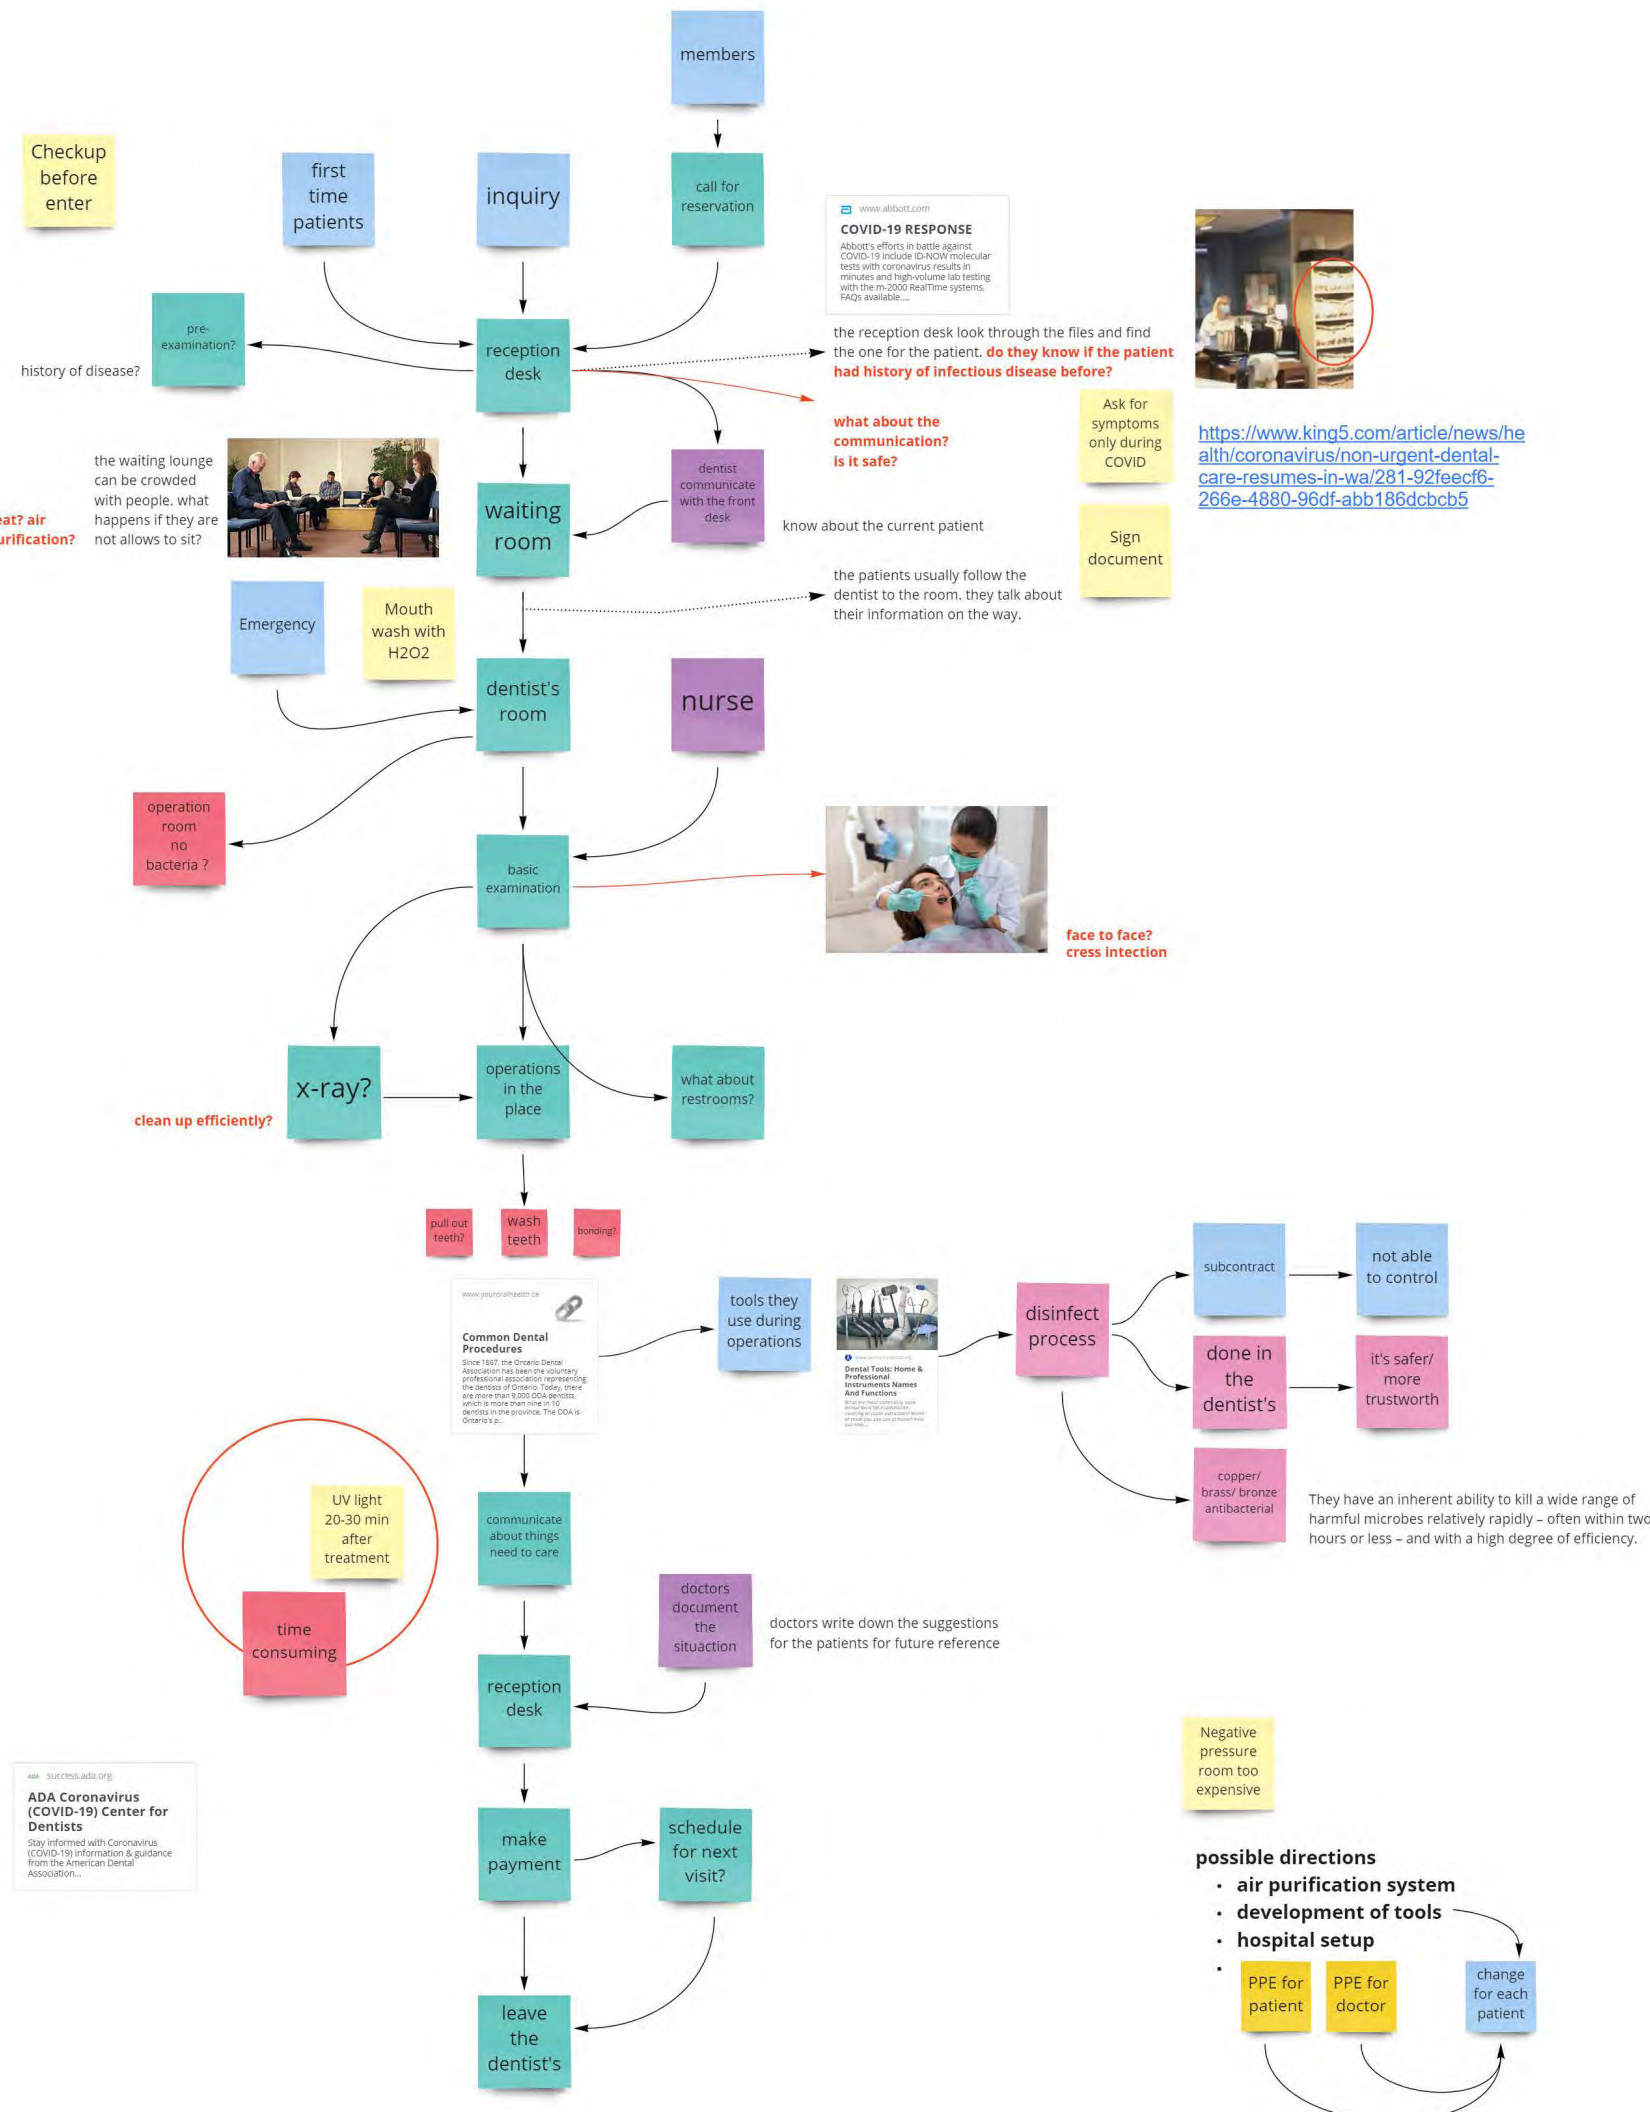

Dental Clinic Layout

- Safety Standard
- Space
- Interior Design
- Equipment
- Reservation System
- Monitoring System

Changes made during COVID-19

waiting room

- cancel it if possible/ let the patient wait outside until called by phone
- use plastic or leather chair if possible
- block every other chair

before arrival

- call the day before for the symptoms
- if yes, send pictures before appointment with special tool
- remote session

start appointment

- one staff go out to invite the patient
- only protected staff touch things
- measure temperature
- phones, keys and bags put on a table covered with paper
- wash hand and mouth

during treatment

- aerosol

after treatment

- remote payment
- clean the clinic
- replace head cover
- clean chair with spray and wipes
- change plastic on the light

Negative pressure room and other solutions

negative air pressure - **prevent** airborne diseases **from escaping** the room and **infecting** other people

- A machine pulls air into the room. Then it filters the air before moving it outside.
- a **lower air pressure** indoor allows outside air into the room; any air that flows out of the room has to pass through a filter

hospitals are not always ready to handle influxes of infected patients

To prevent unbalanced pressure in the critical negative air rooms, routine checks should be made.

www.uofmhealth.org
Hospital Isolation Rooms | Michigan Medicine
 Top of the page...

ahgservicesllc.com/post/2016/03/22/title-title

positive air pressure - when a person has a **weakened immune system**

- Clean, filtered air is constantly pumped into the room.
- the use of positive pressure is the location of a habitat in an area where there may exist flammable gases such as found on an oil platform or laboratory cleanroom

use it for the chairs in waiting room?

What can you expect while in isolation?

- Everyone who enters or leaves the room needs to wash his or her hands thoroughly.
- You may be allowed to have visitors. But all visitors and hospital workers must wear masks, gowns, and gloves. In some cases, only certain family members may be allowed to visit. Children may not be allowed. People who have colds, the flu, or other illnesses won't be allowed.
- **The door to your room may need to stay closed at all times.**
- You may need to **stay in your room**, except for tests or procedures that can't be done in your room.

Texas dental office reopen

limit dentists' hand movement
fear/anxiety

"I only have three months supply. More is needed state-wide. I hope the state could give us more PPE. Because that is still a challenge."

Dr. Fred Rabinowitz

Other negative solutions

Lab

* Components are not drawn to scale

Reopen guidance and PPE

Precautions during Pandemics

- Minimize time in waiting room
- Spacing emergency patients 6 feet apart
- Consider having patients wait in their cars & be called in via phone/text
- When providing service in an integrated health system with medical services, consult with medical colleagues to review protocols and make necessary adjustments to have the above steps as some jurisdictions may have stricter recommendations

Continue practicing standard precautions

- PPE
- Sterilization
- Surface disinfection
- Handling sharps
 - Be care of cutting the gloves/PPE
- Reinforce trianing

www.epa.gov

List N: Disinfectants for Use Against SARS-CoV-2 (COVID-19) | US EPA

Search EPA's list of registered disinfectants for use against SARS-CoV-2, the virus that causes the novel coronavirus (COVID-19). ...

Products that kill virus within 5 minutes

66 Heavy Duty Alkaline Bathroom Cleaner and Disinfectant

Avert Sporidical Disinfectant Cleaner Wipes

Micro-kill bleach germicidal bleach wipes

Coronavirus Disease 2019 (COVID-19)

Coronavirus disease 2019 (COVID-19) is a virus (more specifically, a coronavirus) identified as the cause of an outbreak of respiratory illness first detected in Wuhan, China. ...

Ensure that you have the appropriate amount of personal protective equipment (PPE) and supplies to support your patient volume. **If PPE and supplies are limited, prioritize dental care for the highest need, most vulnerable patients first.**

Telephone screen all patients for symptoms consistent with COVID-19.

Remove toys, magazines, and other frequently touched objects that cannot be regularly cleaned or disinfected from waiting areas.

Return to Work Interim Guidance Toolkit

Overview

This toolkit contains interim recommendations from the American Dental Association's (ADA) Advisory Task Force on Dental Practice Recovery. Since this is interim guidance, it is focused on the short-term management of dental practice during the COVID-19 pandemic as some offices return to providing non-emergent care. Details not specifically addressed in the interim guidance will be left up to the professional judgment of each dentist. The possible integration of additional infection control measures, air purification systems, and any other safety recommendations will be addressed by the appropriate ADA agency as the COVID-19 knowledge base grows.

The ADA Task Force was convened to advise in the development of tools to support dentists who are returning to work after the COVID-19 closures and practice restrictions. It is recognized that different areas will return to a more familiar style of practice at different times, and under different circumstances. Each dentist will need to incorporate their clinical judgment with their knowledge of the incidence of COVID-19 cases in their area, the needs of their patients, and the availability of any necessary supplies to re-engage in the provision of elective dental care.

Due to the evolving understanding of the world's knowledge of SARS-CoV-2, it is expected that more recommendations will be brought forward that might impact how dentists deliver care. Further information and recommendations will be provided to our members as it becomes available.

The ADA recognizes that as of May 1, 2020 the Centers for Disease Control (CDC) recommends postponement of elective procedures, surgeries, and non-urgent dental visits. As various jurisdictions ease restrictions on provision of non-emergent care the ADA offers this Return to Work Interim Guidance Toolkit.

For COVID-19 resources from the ADA, visit the ADA Coronavirus (COVID-19) Center for Dentists at ada.org/covid19.

- In-office patient Registration Procedures
- Reception Area Preparation Strategies
- Chairside Checklist
- Staff Protection Strategies

What are droplet precautions?

- For patients known or suspected to be infected with pathogens transmitted by respiratory droplets that are generated by a patient who is coughing, sneezing, or talking
- Put a mask on the patient
- Place patient in a single room
- Don a mask upon entry into the patient room and leave it on
- Wear a respirator when treating patients diagnosed or being investigated for COVID-19

What else can we do?

- Prepare for when normal operations resume
 - Close and stock clinics
 - Follow any cleaning products recommended by health authorities for disinfecting patients and returning to work
- If you have excess stock of PPE critically needed by frontline healthcare workers consider contacting your local hospital to see if you can share the excess stock
- Continue to monitor reliable sources of information such as CDC, ADA, and OSHA

武汉大学研究人员制定对于牙医和牙科学生的新冠病毒防护指南

发表于中国武汉市的新冠肺炎疫情已成为全球关注的焦点。武汉大学口腔医院口腔颌面外科的牙医和牙科学生是新冠病毒感染的高风险人群。武汉大学口腔医院口腔颌面外科的牙医和牙科学生应如何保护自己，减少感染风险，成为大家关注的焦点。武汉大学口腔医院口腔颌面外科的牙医和牙科学生应如何保护自己，减少感染风险，成为大家关注的焦点。

- Body temperature testing and recording for every patient
- Gargle with anti-virus/bacteria antiseptic mouthwash
- Saliva ejector is needed

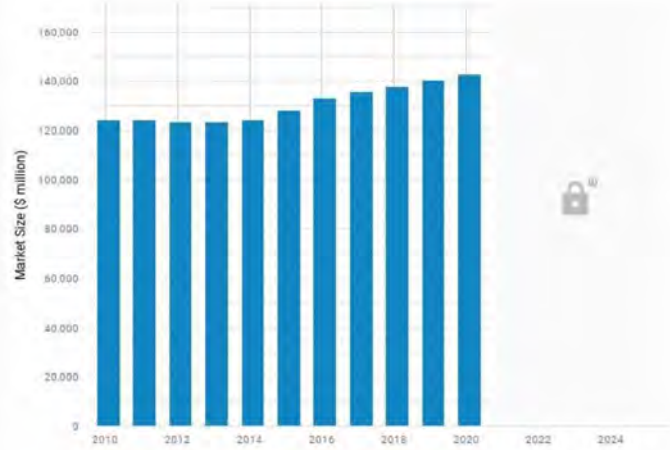

Not killing the virus but reduce the droplet.

Curious about what drives these trends? IBISWorld's Dentists in the US Industry Report has got you covered.

[VIEW INDUSTRY ANALYSIS](#)

Covid-19 Impact Update

IBISWorld's analysts constantly monitor the industry impacts of current events in real-time - here is an update of how this industry is likely to be impacted as a result of the global COVID-19 pandemic:

- **Revenue** for the Dentists industry is anticipated to decline due to social distancing requirements.
- Most practices have closed, **only reopening for essential procedures and emergency visits**. As a result, industry operators are expected to generate significantly less revenue in 2020.
- Several provisions within the CARES Act may provide some measure of relief for industry operators. However, the industry is ultimately expected to see a decline in industry operators due to practice closures.

Dental Clinics during COVID-19

The challenges to dental clinics
during the pandemic

Team D:
Emma Zhu, Sabrina Xu, Kexuan Dong, Michael Zhu

Current Situation

As an industry closely related to oral hygiene, the dental industry has been dramatically impacted by the COVID-19 pandemic.

CLOSED

UNTIL

FURTHER

NOTICE

COVID-19

A First Look at Economic Impact of COVID-19 Dental Practices

DENTAL PRACTICE STATUS

Source: ADA Health Policy Institute

According to the ADA, **95% of all dental offices opted to close** except for urgent or emergency procedures. It is a critical period of time for the industry to adjust and evolve for new common with the pandemic.

Why dental clinics

Necessity:

- Oral hygiene is essential and closely tied to the quality of life

Exposure:

- Dental practices involve close contact to mouths, making dentists and patients vulnerable during treatments

Smaller business:

- Dental clinics are usually smaller in terms of scale and finance, making a pandemic more impactful to dental clinics

Research Highlight - Technology

Negative air pressure rooms in hospitals

Personal negative air pressure device

Negative air pressure - **prevent** airborne diseases **from escaping** the room and **infecting other people**

- A machine pulls air into the room. Then it filters the air before moving it outside.
- A lower air pressure indoor allows outside air into the room; any air that flows out of the room has to pass through a filter

Research Highlight - Emotion study

Research Highlight

- Gesture study

- Limitation of movement
- Vulnerable and being open
- Limited eyesight

Research Highlight - Interview

Name: Allen Mao

Age: 21

Problem: Tooth extraction

Clinic: Century Grove Dental Care

- “I contacted the clinic by texting and making phone calls, **due to the current situation, I had to make multiple phone calls,** and it was annoying.”
- “There were **four patients in the waiting room,** including me, and some dentists. Each patient is in an open cell.”
- “I was **concerned about the risk of getting COVID,** but I had to face the fact that I must take the treatment.”
- “The clinic **did not provide me with any PPE or additional disinfection.**”
- “They did not notify me of neither safety concern about Covid-19 nor asked me to make a report to them if I got symptoms in 14 days after treatment.”

Design Approach

Our Mission

For dentists and patients caring about oral hygiene and facing safety threats of COVID-19, we provide **safer solutions** and **better experience** both **inside and outside clinics** with **affordable products** and **user-friendly system**. Help clinics get through this by solving problems **in short terms**, **improving the business model** and **building trust** during the pandemic.

Concepts

Concept 1 OUTSIDE CLINICS

Remote Dental

A platform that extends the dental treatment to provide remote communication between patients and dentists.

This eliminates the non-emergency visit, reduce the risk of contact, while still closely connect patients and dentists, maintaining patients' oral hygiene and dentists' business.

Roll-out timeline:

Short-Term

Product Categories:

Platform

App

UI

UX

Concept 1 OUTSIDE CLINICS

Remote Dental

BEFORE:

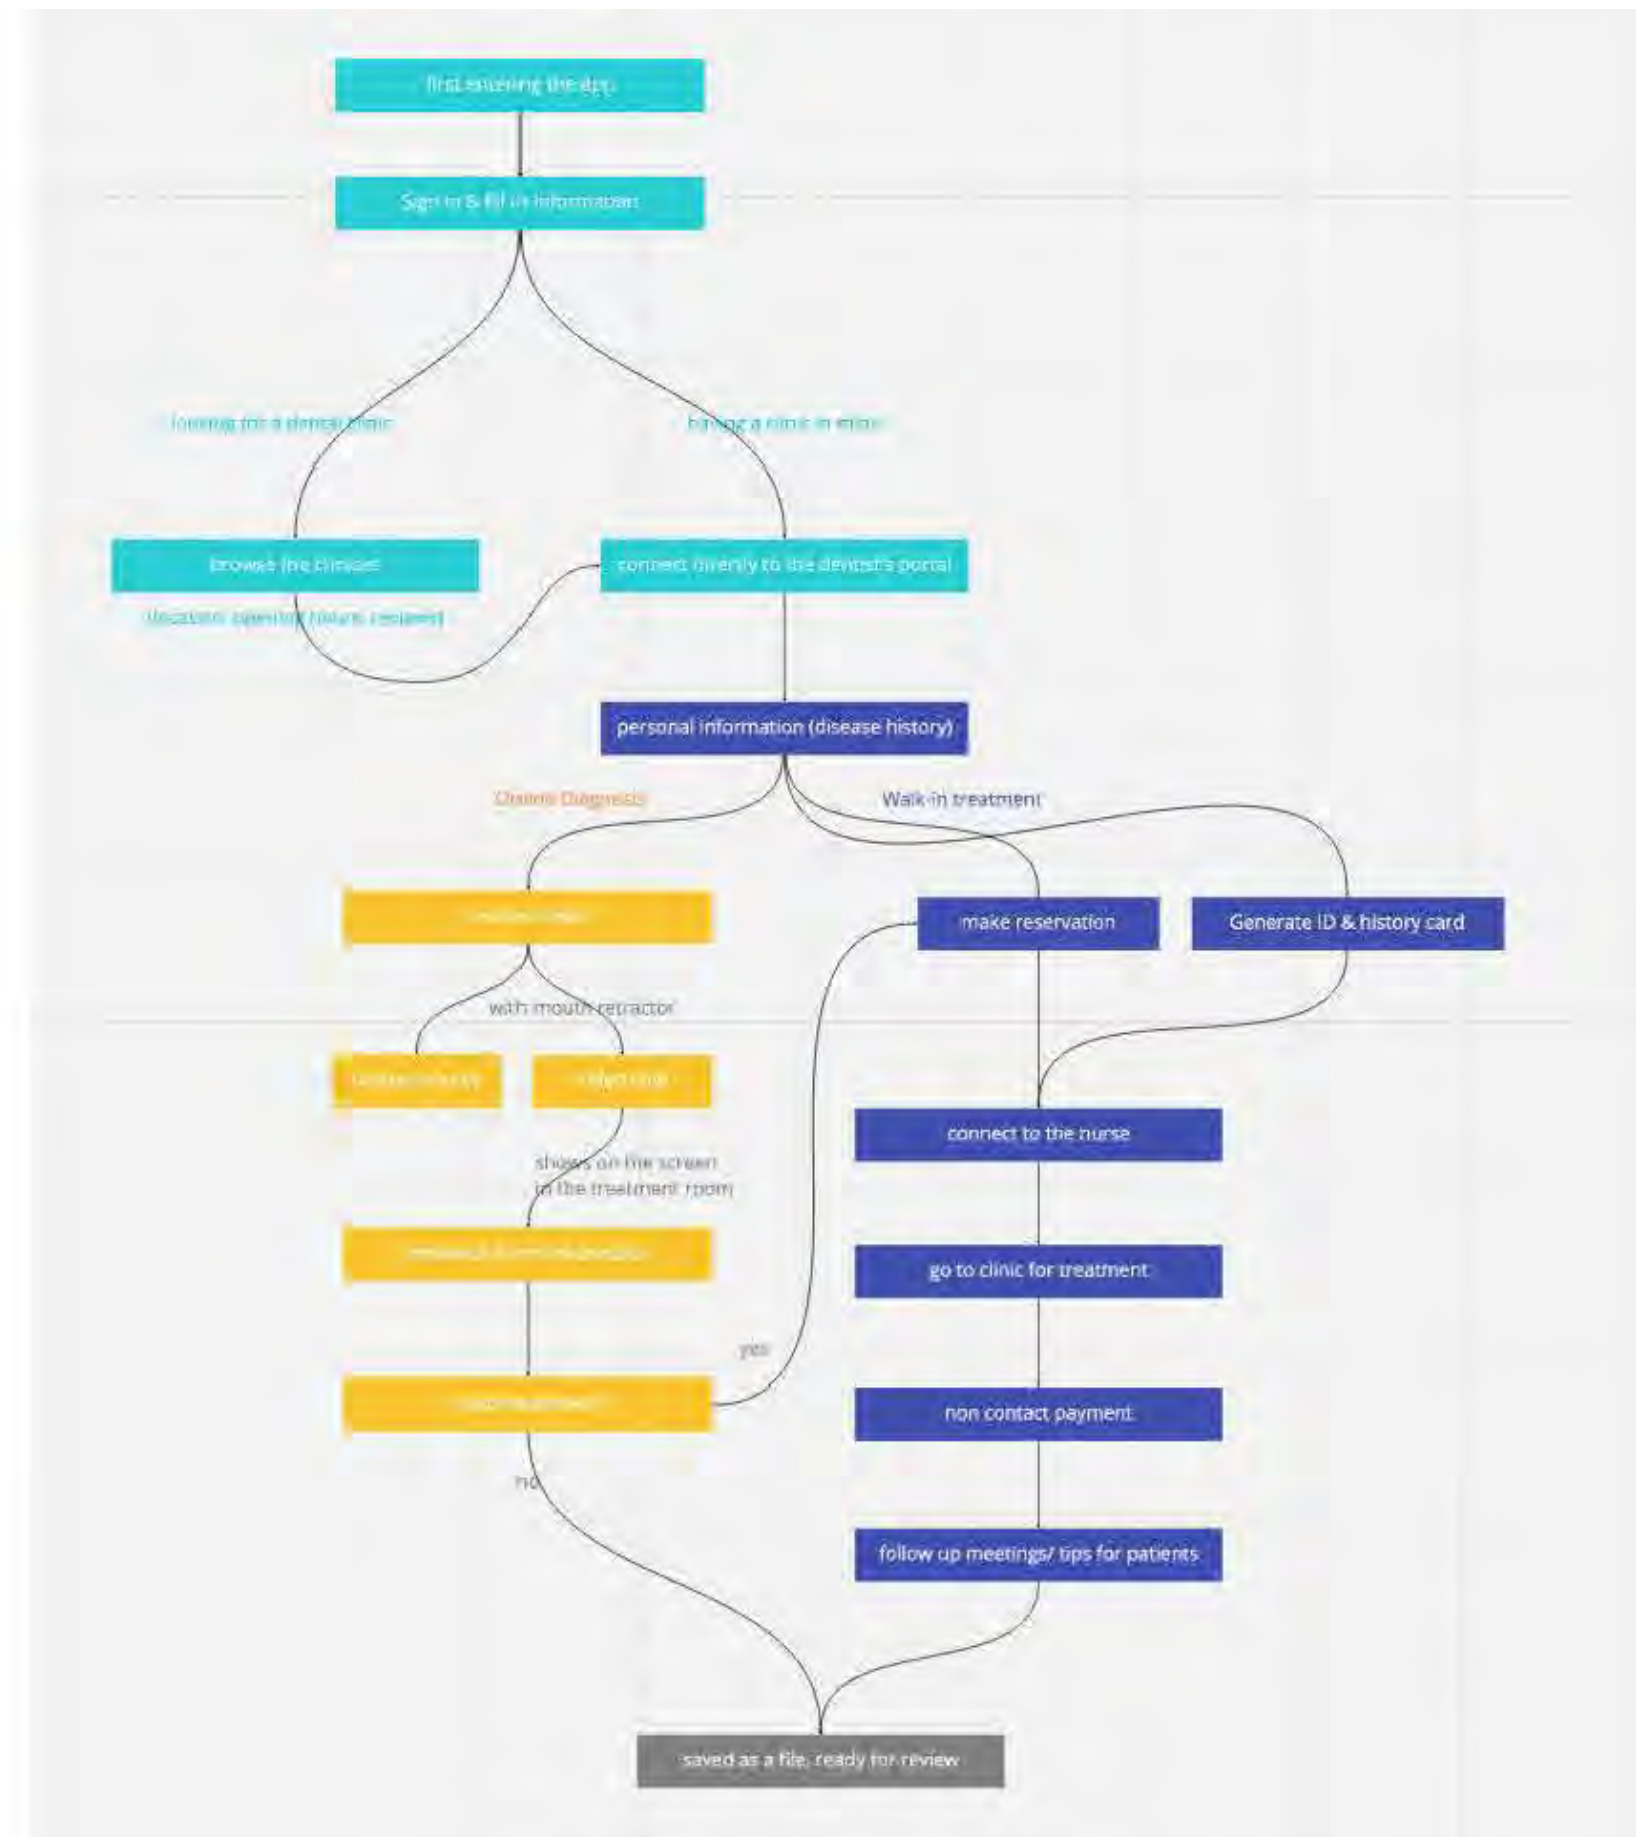

- Find dental clinics
- Make appointments
- Photos/videos for diagnosis
- Safety instructions
- Insurance/IDs/Medical history

DURING:

- Check-in
- Data transfer
- Patient tracking

AFTER:

- Further consultation
- Payment
- Health tracking
- Reviewing and rating
- Covid-19 report

User Scenario

Miranda is having serious tooth pain, but her dental clinic is not in operation due to Covid-19.

She downloads XXX app, fills out basic information and used filters to find the ideal available dentists.

She takes remote diagnosis followed by the guidance, communicated her symptoms with the dentist through the App.

Miranda successfully makes the appointment, and the system generated her dental ID for faster and more accessible treatment experience.

She presents her digital dental ID to check-in.

Concept 1 Remote Dental

User Scenario

Her dentist knows everything through the system.

She makes the payment on the phone with no contact.

It is a pleasant experience; she rated and left comments on the clinic and dentist.

Eight days later, Covid-19 symptoms appealed to her, Miranda reports her health issue on the App.

The dental clinic receives the emergency Covid-19 report and staffs take the tests soon.

Attachment Devices

Device accessories that improve the sterilization level addressing on air filtration, instant tool sanitization and UV light attachments.

This is an affordable and non-invasive way for dentists to build a cleaner clinic; and for patients to enjoy an efficient and worry-free experience.

Roll-out timeline:

Mid-Term

Product Categories:

Vacuum attachments

Tool sanitizers

UV lights

Surface coverings

Concept 2 INSIDE CLINICS

Attachment Devices

Concept 2 Attachment Devices

User Scenario

Dentist purchase the attachment set on the company

He install the attachments on to the dental chair with the help of a technician

Before the treatment, nurse selects the essential tools and puts them into the tool box

After patients lied on the dental chair, the nurse turns on the vacuum device for air filtering

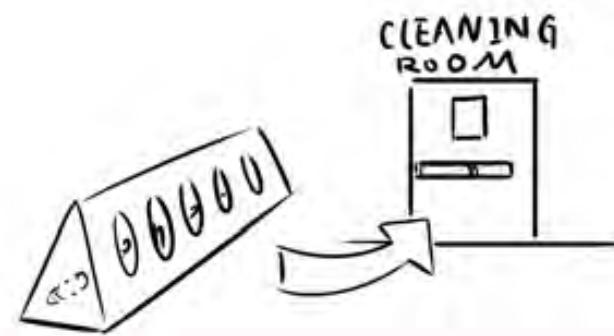

The dentist uses the tools during the treatment and puts tools back to the sanitizing box

Concept 2 Attachment Devices

User Scenario

The device is triggered by weight change and automatically sanitizes the tools by UV light

After the treatment, the station holding the tools is removed from the tray and sent for further sterilizing in the other cleaning room

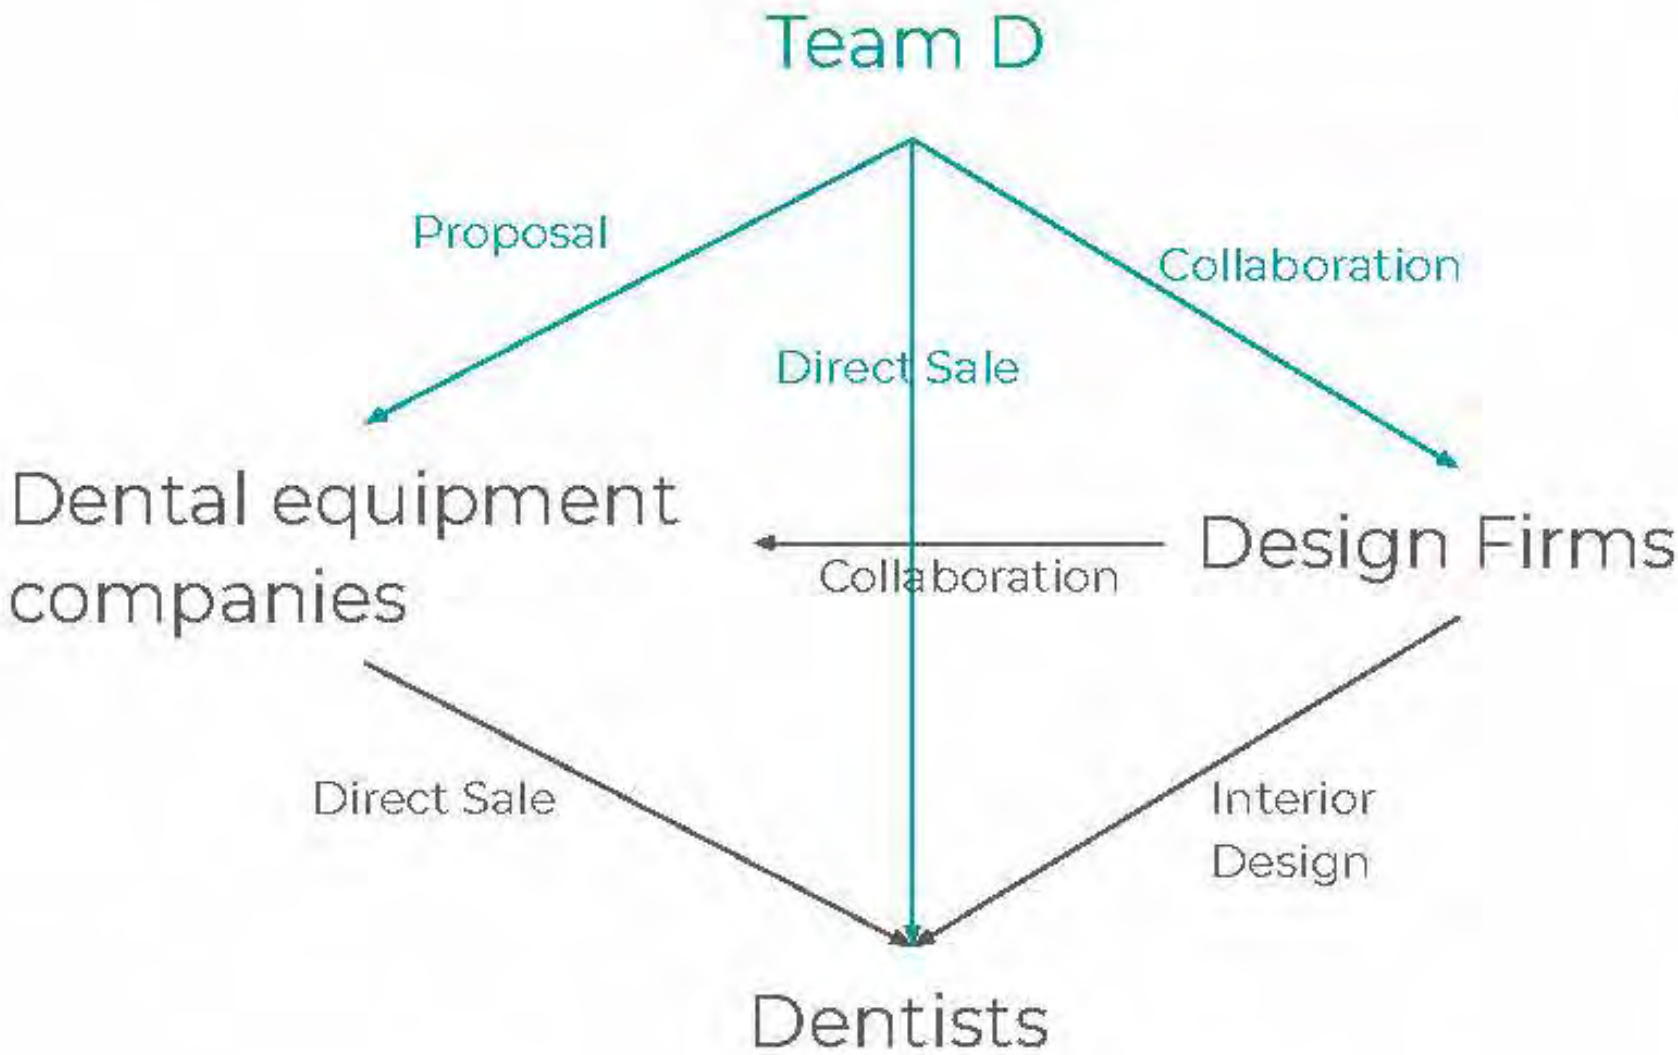

Dentist turns on the UV light device when patients left the treatment room

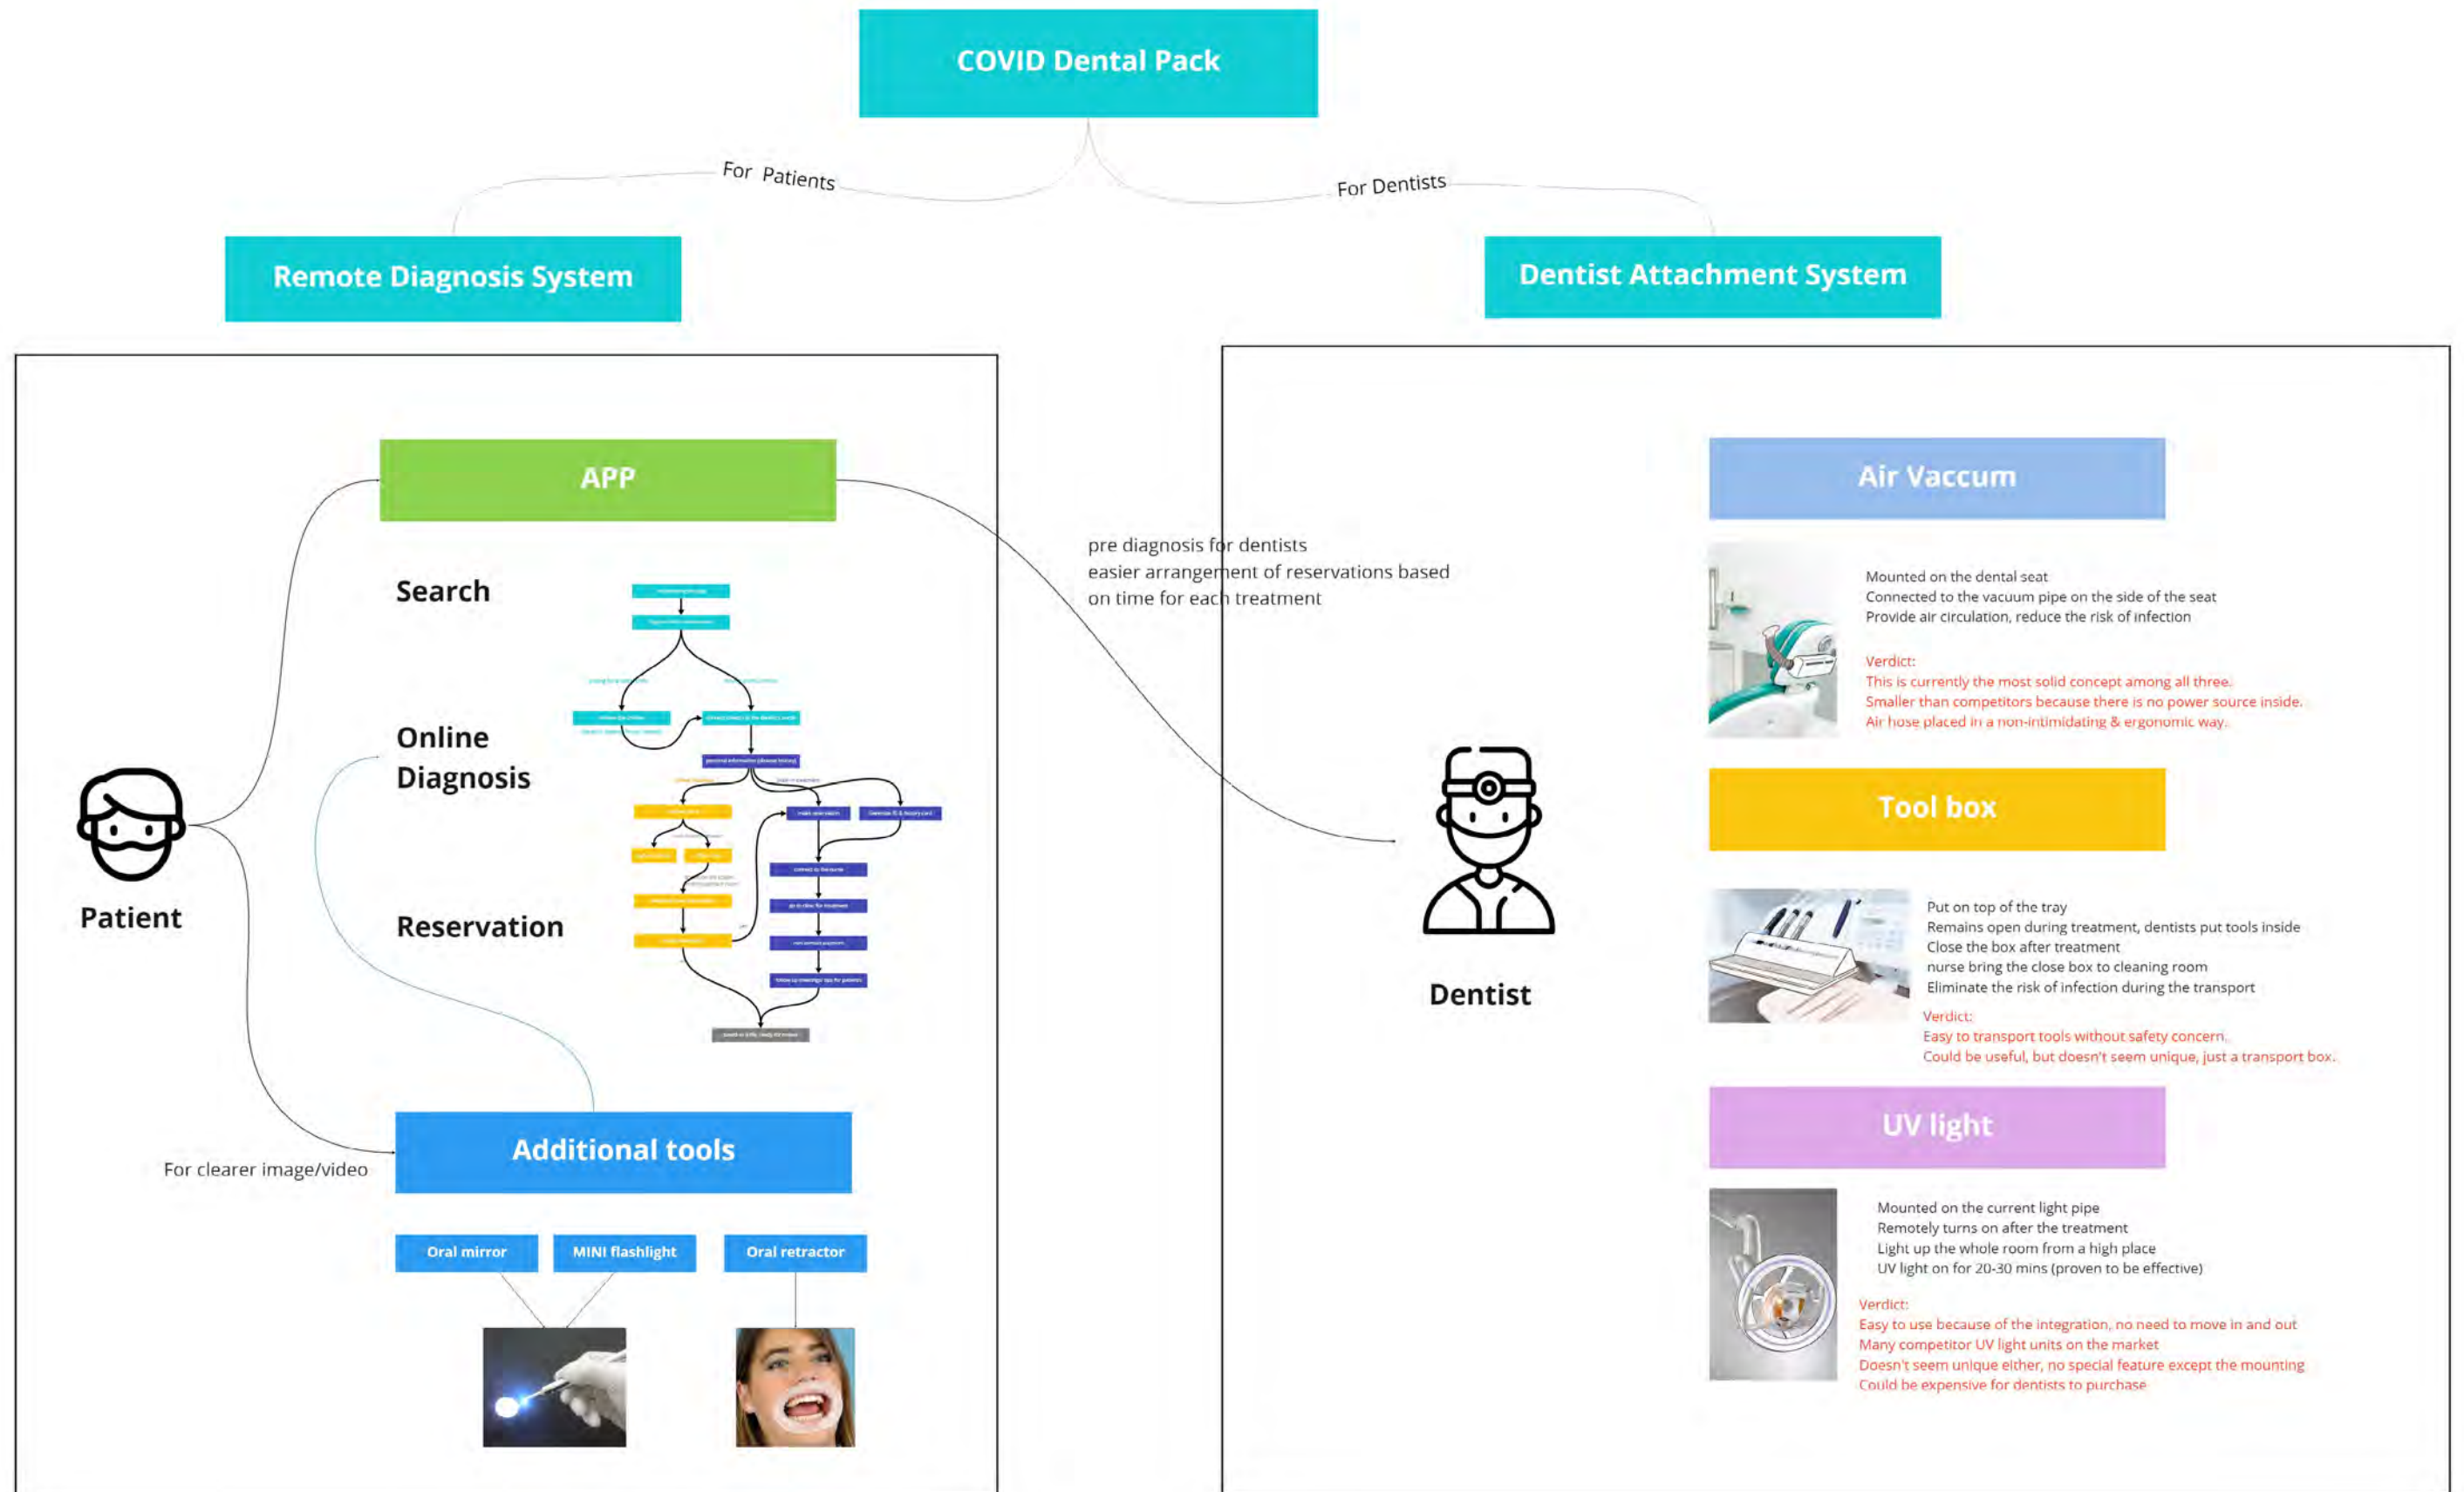

UV light continues to sterilizing the air and surfaces up to 20 minutes and then automatically turns off.

Work: Co-owner of DJ Dental Group, ADA, CDA member

"We are **open to all patients** but mostly emergencies"
 "Patients **call in the office to make appointments**, my manager answers the phone."
 "There's **no remote diagnosis, it is mostly done with X-ray**. We add **extra questionnaire for Covid-19**."

"All rooms are disinfected with alcohol and cavicide, not been used for a while between patients."
 "Aerosol vacuum and UV lights are more for the show."
 "Those **vacuums on the market are way too big**. Most of dental ops are designed to fit a chair, cabinets and 3 people (doc, assistant and patient.) Most of my friends **have hard time figuring out where to put that big standing vacuum**. And it's way too noisy."

Scott Jeon, D.D.S.
Age: 28
Work: Pacific Dental Care
Education: University of Florida B.S. Biology, University of Southern California school of Dentistry

"The **front office handles appointments**. I don't talk to patients before making appointments."

"All of the **extra PPE makes it hard to work, hard to breathe**."
 "We don't use aerosol vacuum but I with the owner would invest in one. It is just **too pricy**."
 "Assistants wipe everything down with disinfectant cave wipe and replace tape. **People don't see it**."

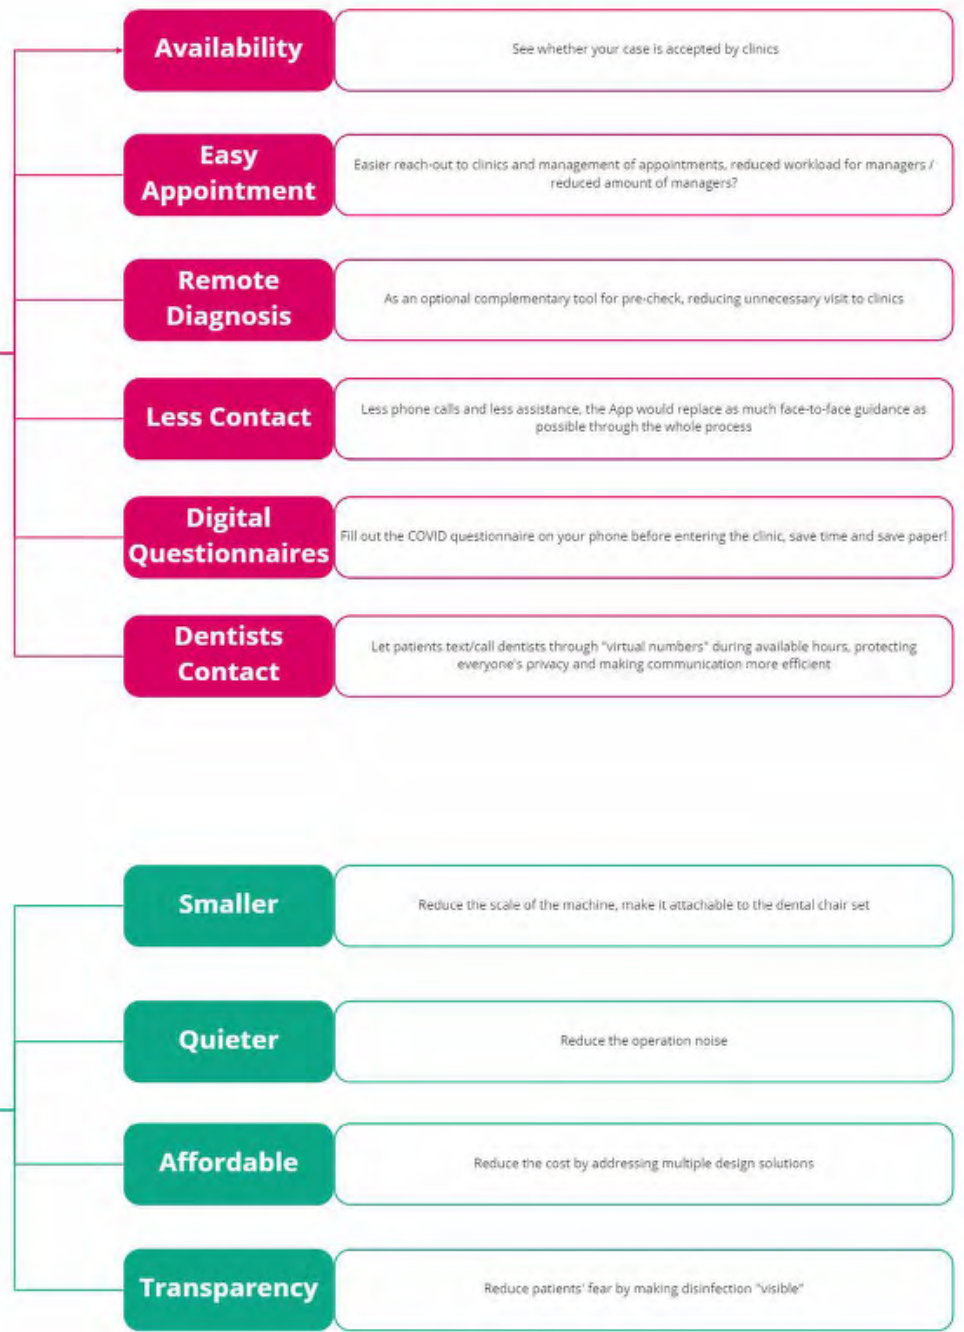

Dee Xia, Junior Dentistry Student
Age: 25
Work: UCLA college dental clinic
Education: University of California, Los Angeles

"We provide **simple pre-diagnosis to patients through phone calls**"
 "The front office answers phone calls. But if the patients have some questions after treatment, they could contact us directly. **Some dentists have business numbers but I'm just giving my personal number for now**."
 "We **only accept emergency cases**."
 "There is **questionnaire** about COVID symptoms released by CDA, most clinics are following that standard."

"My **biggest fear is the aerosol producing** during procedures."
 "The **assistant is required for aerosol producing procedures**."

DESIGN INSIGHTS:

Week 9
Scenarios User Flow
& Form Development

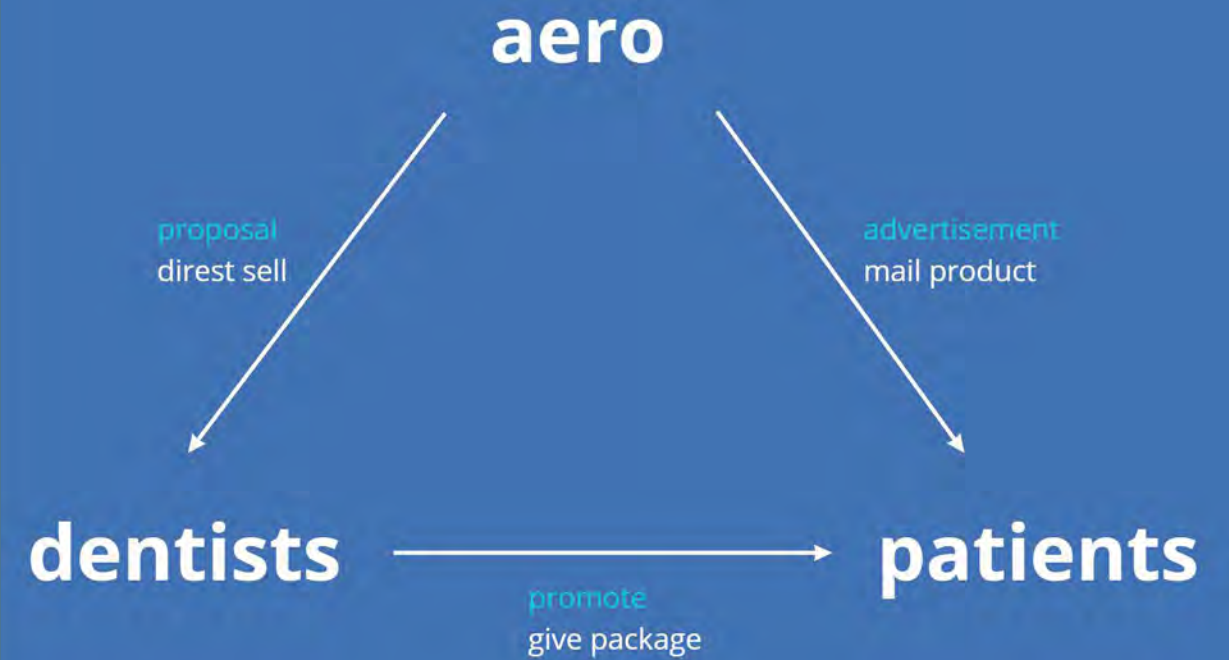

"Connect without Contact"

Aero offers supportive product and software for dental clinics to maintain the trust and connection to their clients during the period of pandemic.

Delivering Piece of Mind to patients

- separating, educating & notifying

- Avoid contact by online diagnosis for routine check
- Show clinic's cleaning & qualified level & reviews
- Educate patients with COVID-19 instructions & sterilizing standards
- Make patients wait outside of clinic & separated from each other
- Visualize the sterilizing process while waiting
- Test aerosol density in air (represent air quality)

Scenario for returning user

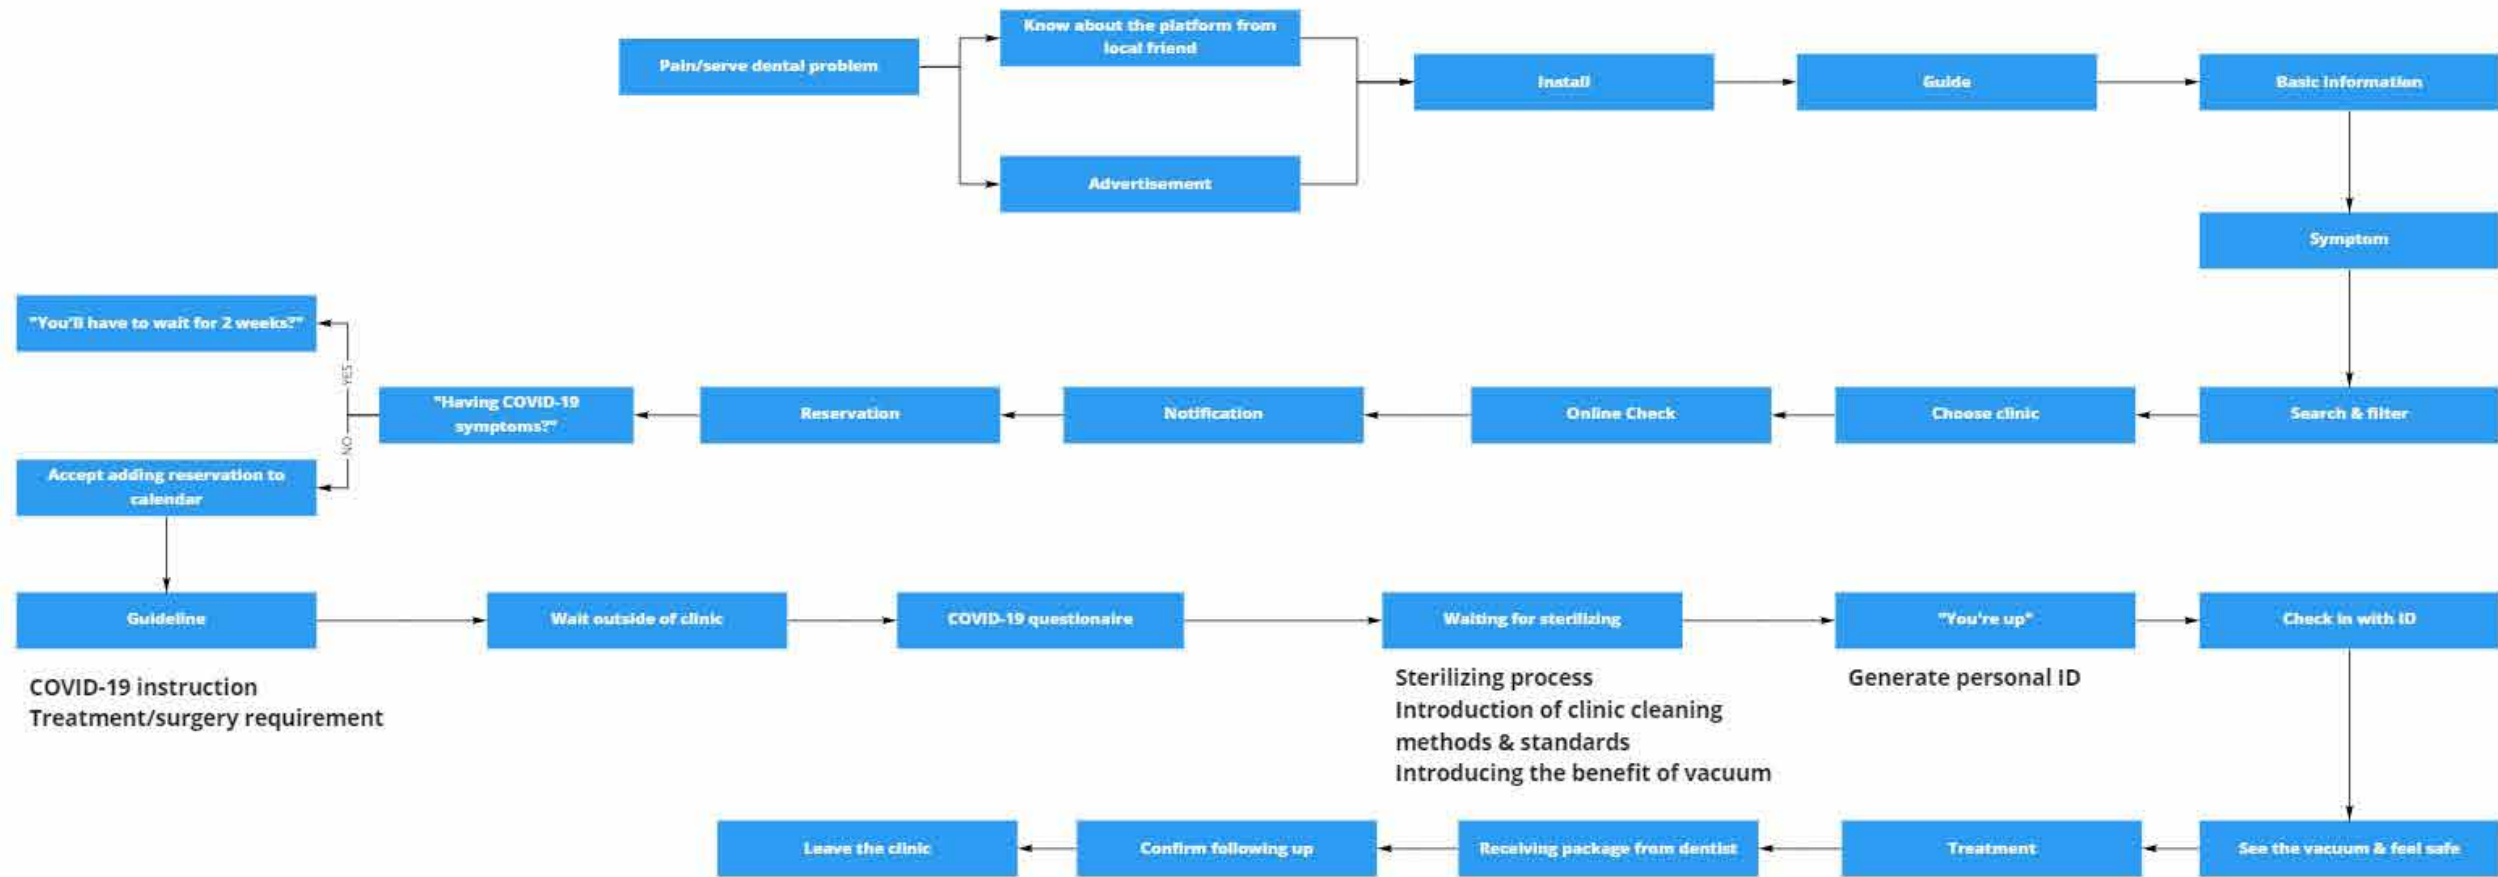

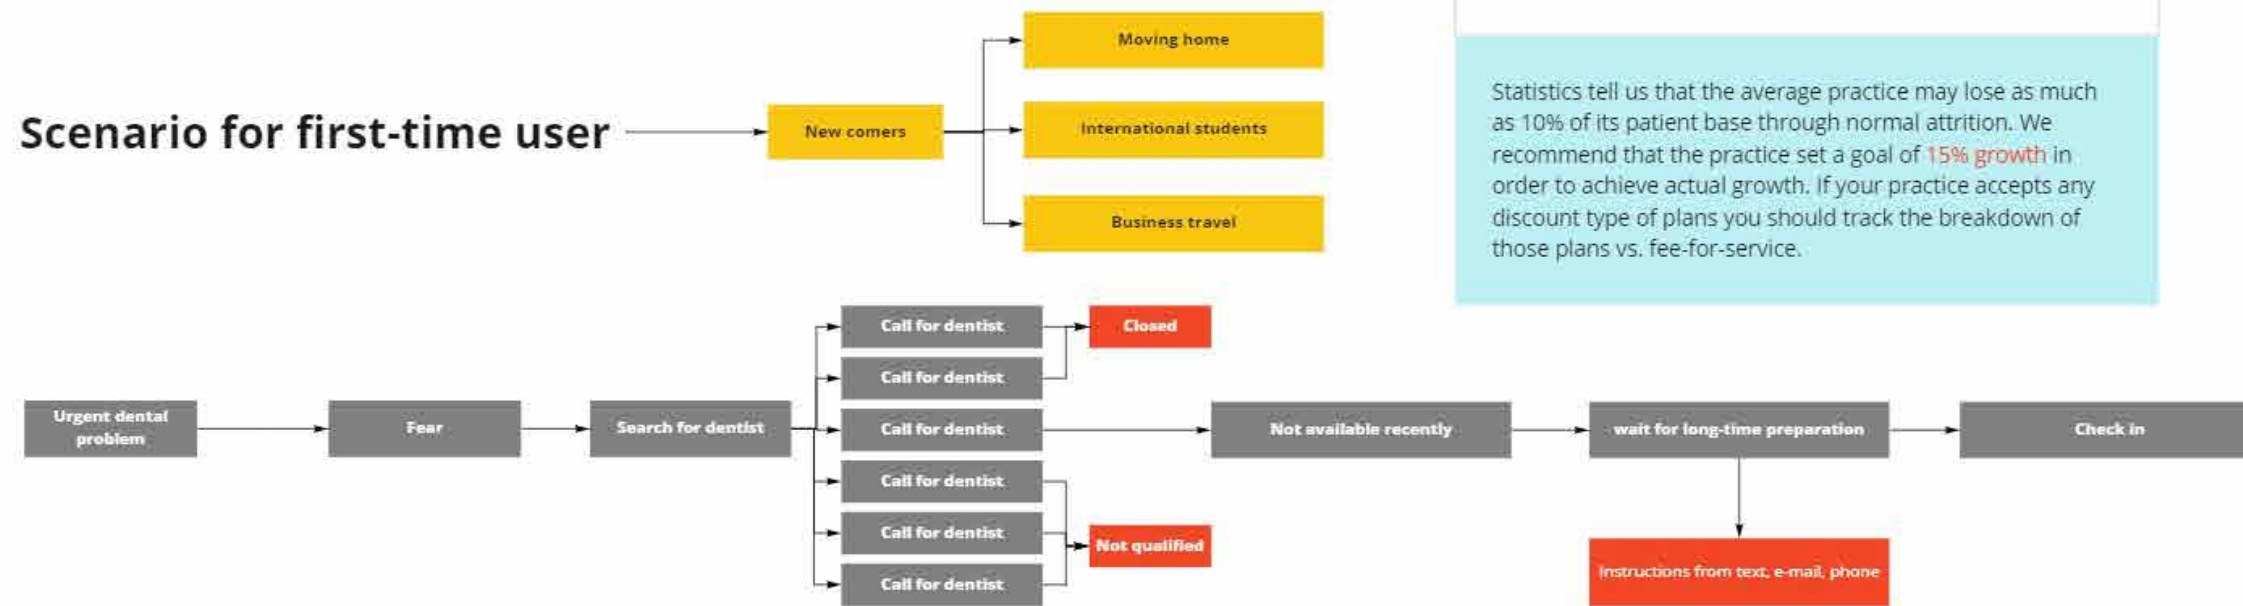

Company promotion & providing tools for better pre-check image

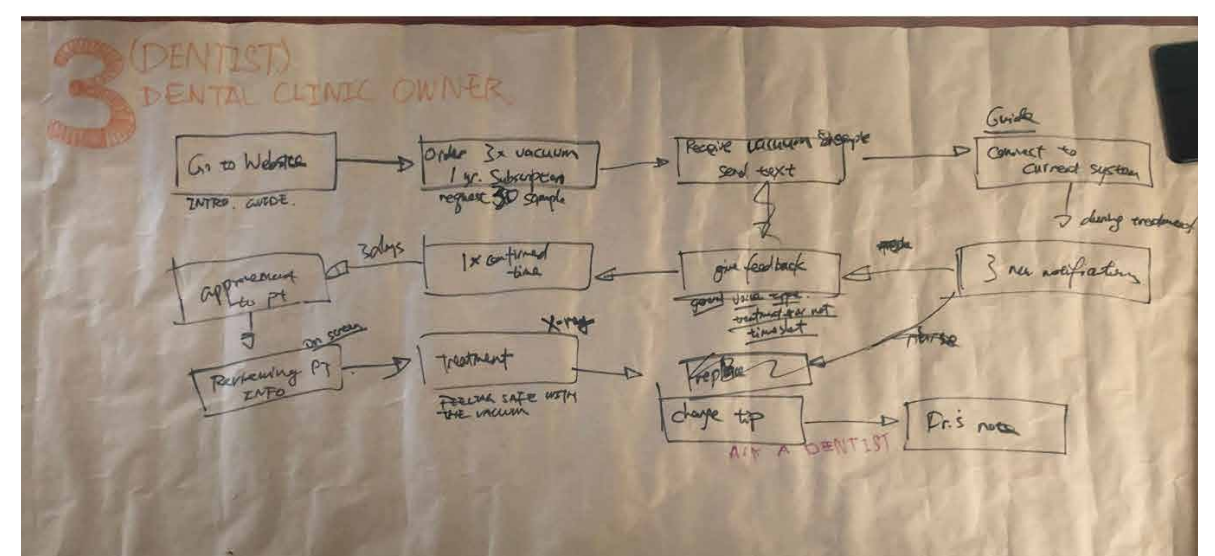

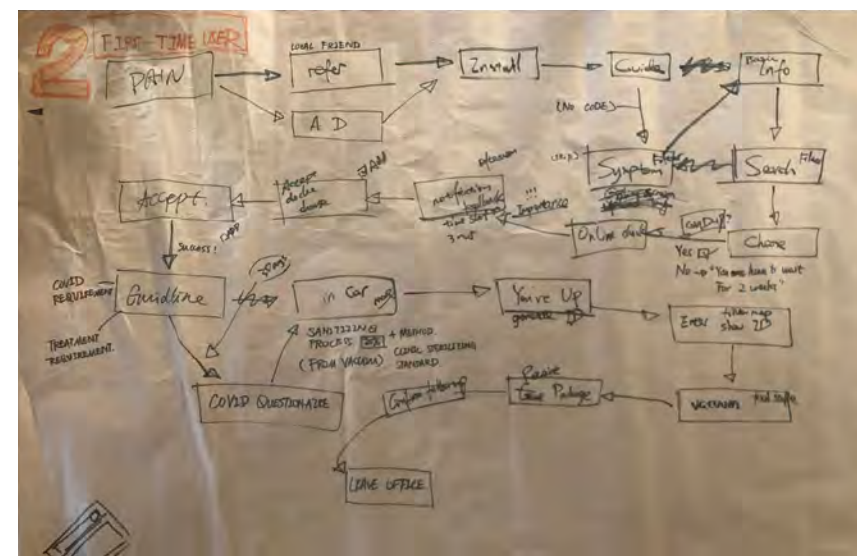

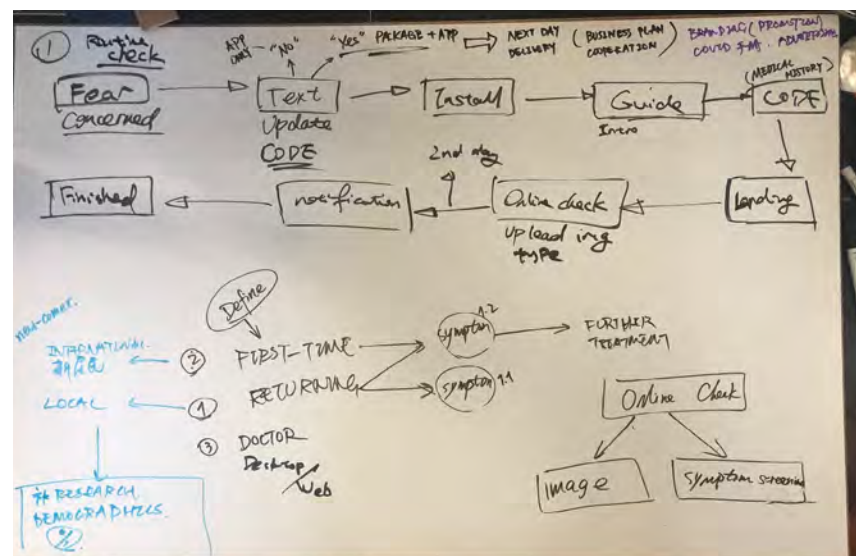

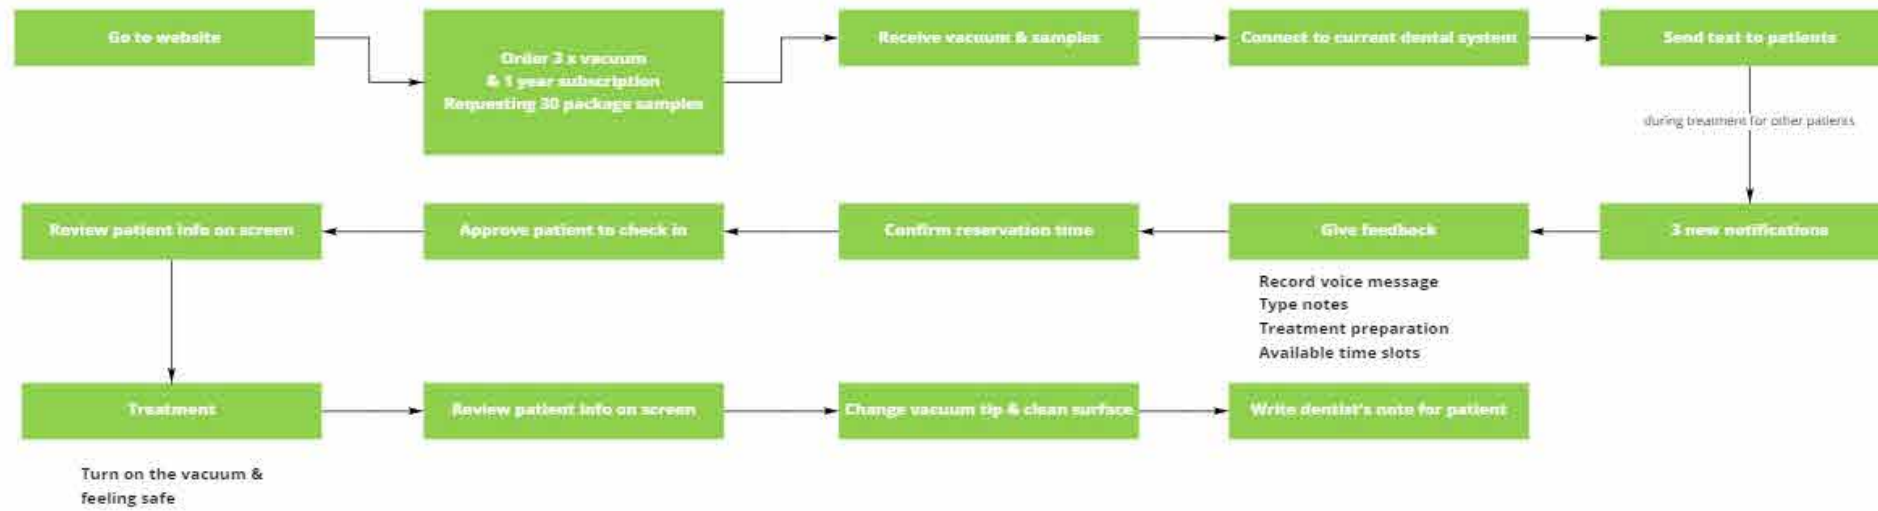

StackPath

Statistics tell us that the average practice may lose as much as 10% of its patient base through normal attrition. We recommend that the practice set a goal of **15% growth** in order to achieve actual growth. If your practice accepts any discount type of plans you should track the breakdown of those plans vs. fee-for-service.

Scenario for dentist

Scenario 1: Dentist

The dentist is browsing website

She sees the aero page and she is interested in aero's product and service

She orders three vacuum and one year digital subscription. She sends texts to her current clients to tell them about the update, and she also requests some package samples to keep in the clinic

At the end of the day, she looks at the app and notices several new messages.

She opens them and type her feedback. Looks like two of them need to come to the clinic for further treatment, so she sends her available times for patients to select.

During treatment, she is able to pull out the record of her previous feedback.

Scenario 2: Returning Customer

Miranda wants a dental check, but she is concerned about her clinic's safety

She receives a text from her dentist, saying that the clinic has an upgrade with aero system. She has already been registered by her dentist and she receives a code.

There is also an option for her to receive a package to help her connect remotely, she clicks yes.

She downloads the app and learned about aero.

The app asks her to type her code, and her personal info has been imported.

She sees the landing page and she wants to do a routine check. She decides to do it after she receives the package.

Next day, she has a delivery.

It's the assistive package ordered by the dentist and shipped by aero

It's the aero package, she opens it up.

She takes out several tools for dental checking

In her app, she first follows the instruction to type in her requests

The she follows the instruction on the phone, puts oral mirror in her mouth and takes a picture.

The picture shows some details of different regions of her teeth.

She finishes up the message and send it to her dentist.

Next day, aero sends her a notification.

She grabs the phone and sees her dentist's feedback.

Her dentist thinks that she doesn't need treatment in the clinic, she just needs to brush her teeth well. She feels relieved that she doesn't need to go to the clinic.

Scenario 3: First-time Customer

Mary is having a toothache. But as a newcomer, she doesn't have a dentist in mind.

Being referred by a friend, Mary downloads the aero app to look for her new dentist.

She looks through the guidance to learn about the app

She skips the step of typing the code, because she doesn't have one.

She puts in her personal info to create an account

She sees the landing page and she wants to send a treatment request.

First, the app asks Mary about her general symptom, this is to help aero find the proper dental clinic.

She looks up the nearby dental clinics equipped with aero system.

As a new patient, she has to do online check first for dentist to know about her basic oral condition. Once she selects her clinic and her dentist, she starts typing the pain region and other details.

Mary also takes a photo with her phones and upload to aero.

The picture is not high-quality but it will do for now.

She finishes up the message and sends it to her dentist. She wants the dentist to reply fast so she adjusts the level of importance.

In the afternoon, she receives the feedback. Her dentist thinks that she does need to go to the clinic, and her dentist gives her three options.

She selects one that fits her timeframe and add it to her calendar.

The app tells her the guidance of visiting during covid-19

She completes the survey about covid-19 symptoms, she doesn't have symptoms so she is clear to go.

On the treatment day, Mary arrives early and waits in her car.

She opens the app and starts the check-in process.

Mary confirms again that she doesn't have covid-19 symptoms

Now Mary can see the room she is about to go in. She sees that the room is being cleaned thoroughly.

She learns that the built-in sensor of the vacuum is monitoring aerosol droplets in the air, and she doesn't feels concerned about the safety.

When she is up, the app generates a QR code for check-in.

She goes to the clinic knowing that the room is fully cleaned.

The aero vacuum protects Mary from cross infection. She feels safe during the treatment

After the treatment her dentist gives her a package, this is to help her with follow-ups in the future.

After treatment, Mary returns to her car.

She opens the aero app again to confirm her next appointment.

She notices that her next schedule has already been updated with time and treatment details.

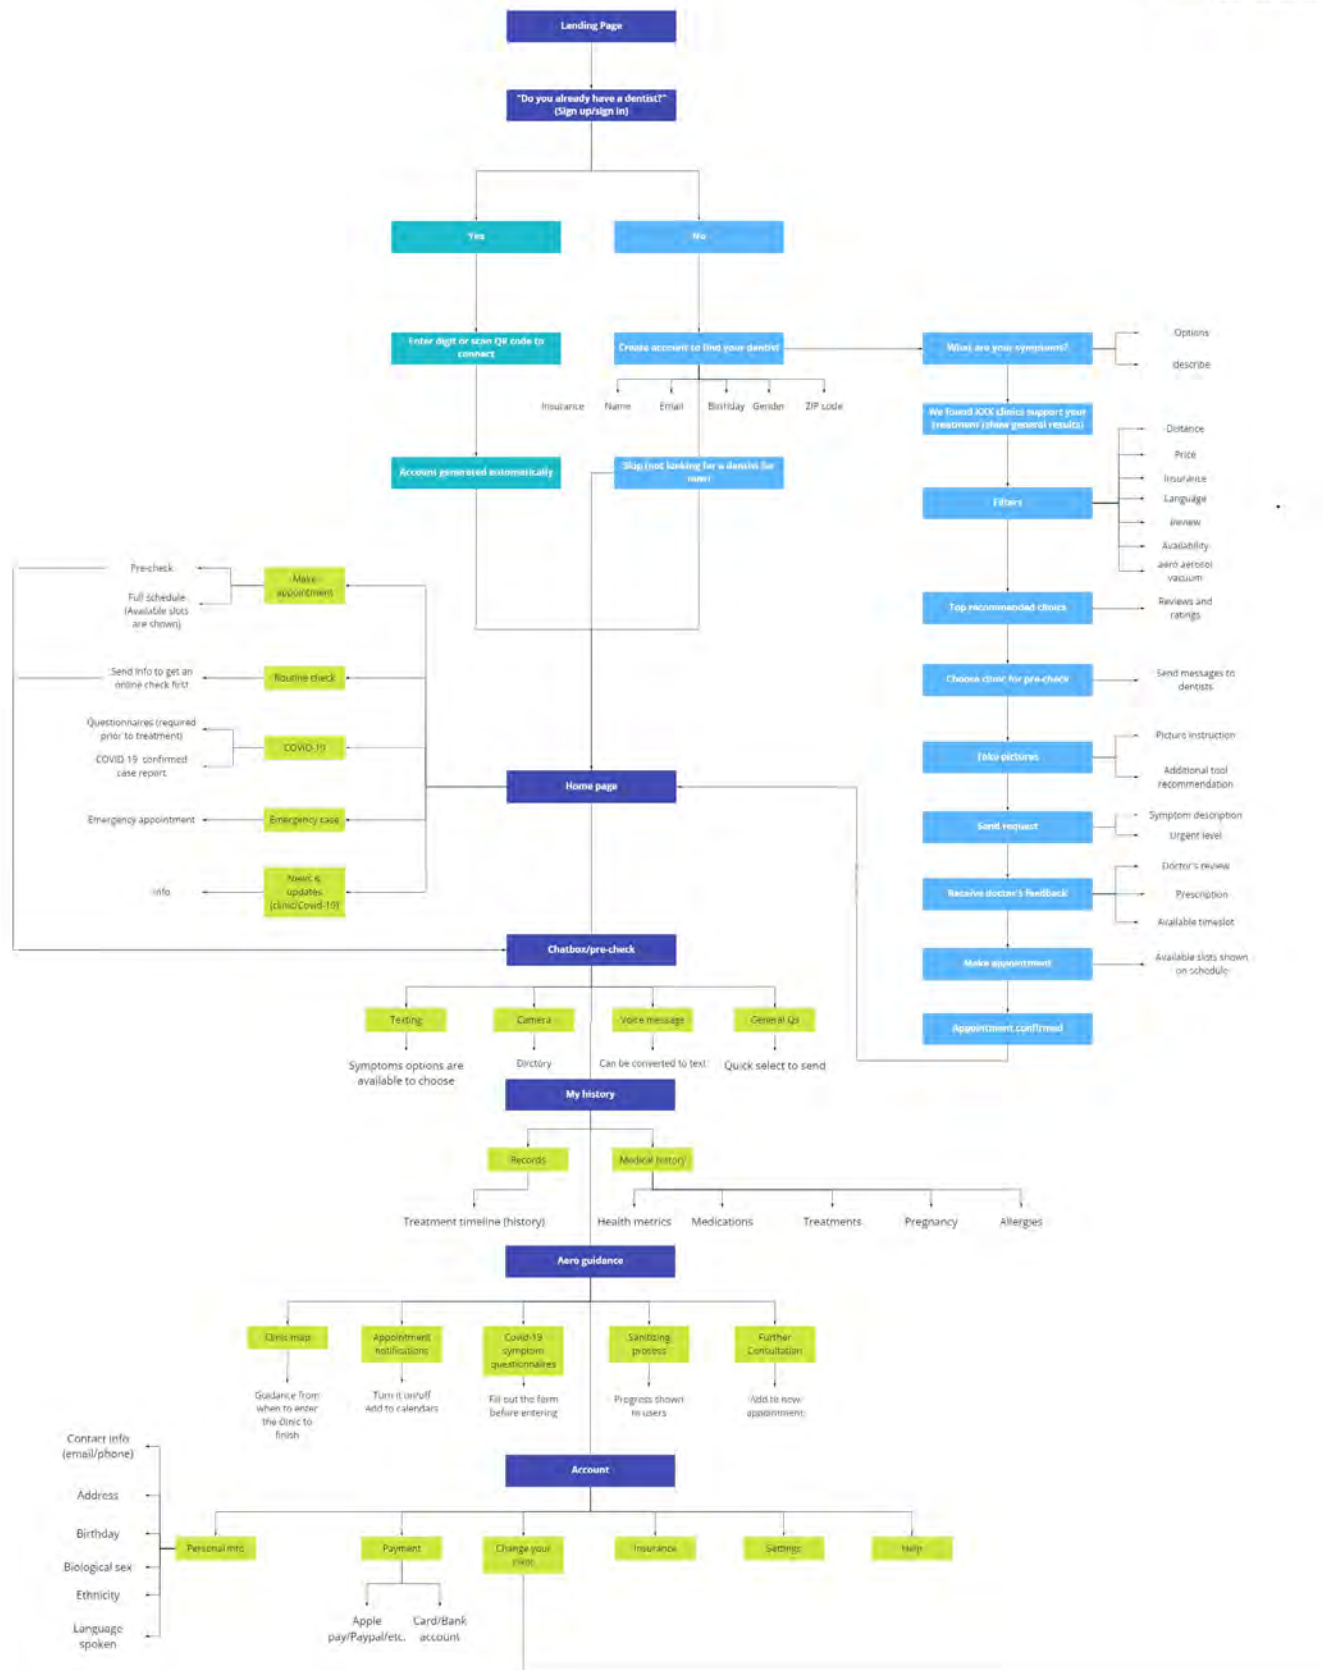

She feels very relieved that aero system is protecting her with streamline process and reliable products.

Connect without Contact

Aero offers supportive product and software for dental clinics to maintain the trust and connection to their clients during the period of pandemic.

Aero Portal

Aero Portal is a digital oral health software that connect patients and dentists during pandemic.

Aero Tunnel

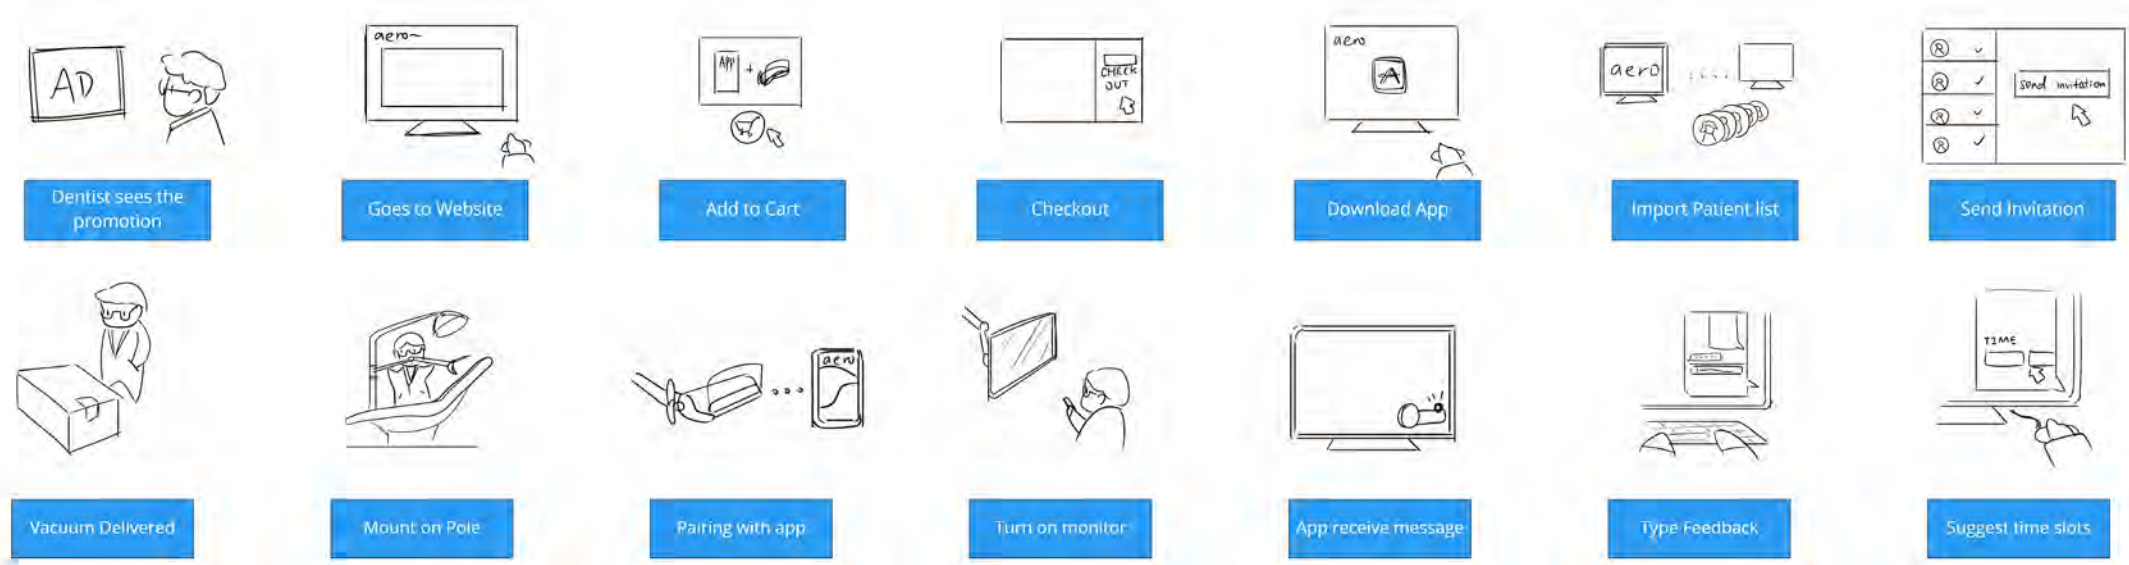

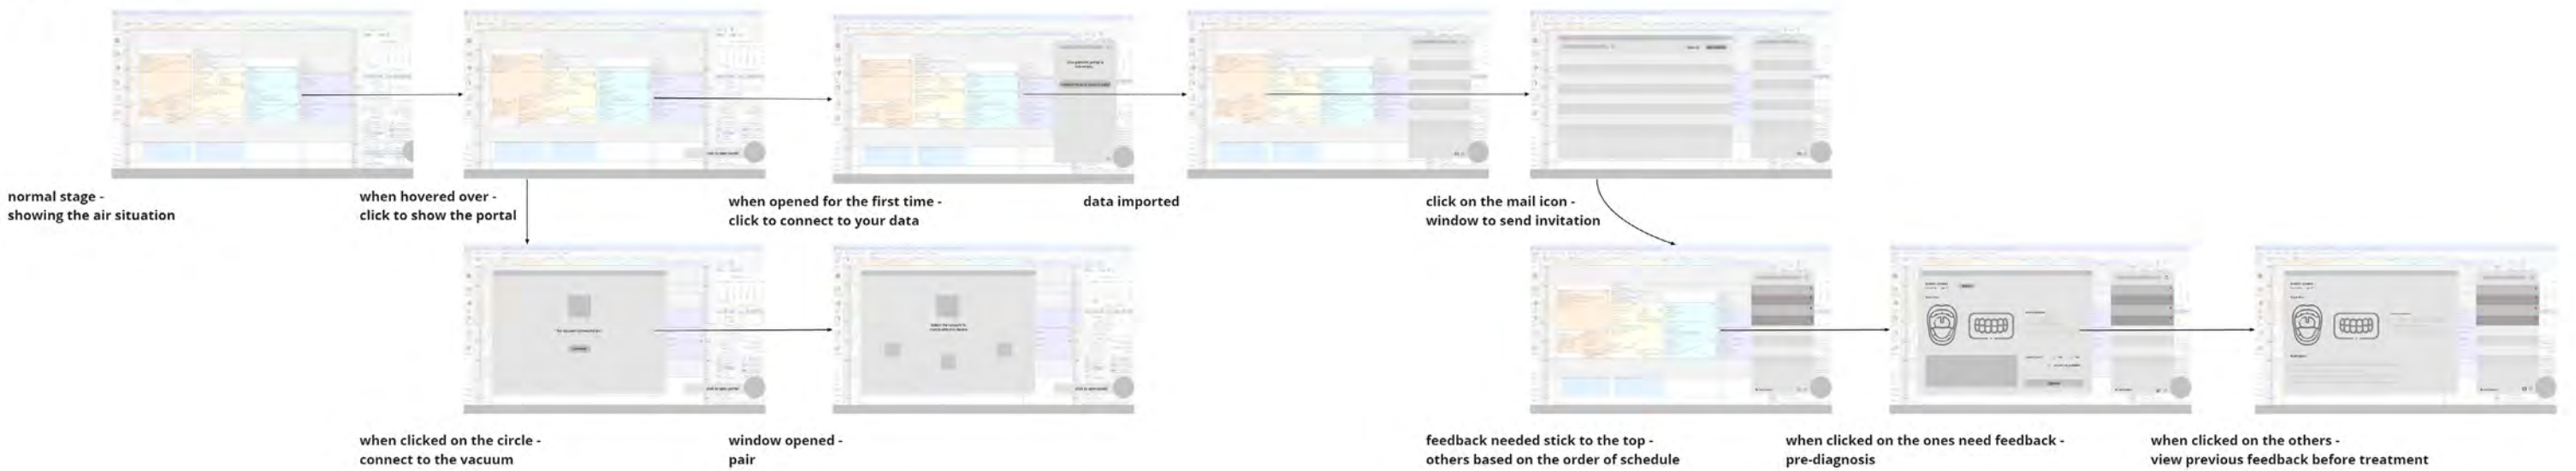

Aero Tunnel is an attachable aerosol vacuum that circulates the air around patient's mouths and prevents aerosol contact between patients and dentists. Aero tunnel is an attachable aerosol vacuum whose main purpose is to guarantee the safety of both the patient and dentist through circulating air around patient's mouth. Aero tunnel, an attachable aerosol vacuum, focuses on protecting the safety of patients and doctors by preventing aerosol contact.

What have we learned?

Dental experience goes beyond treatment

- Remote consulting
- Reservation management

Patients feel vulnerable during treatment

- Design to build trust
- Make patients feel less intimidated

Dental setup is hard to modify

- Addition vs. renovation
- Adapt to current workflow

Scenario story

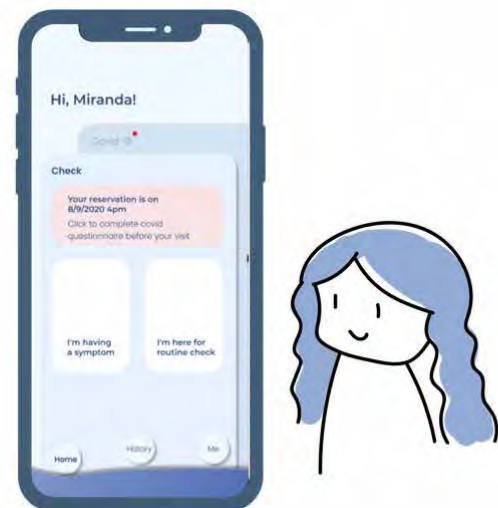

Meanwhile...

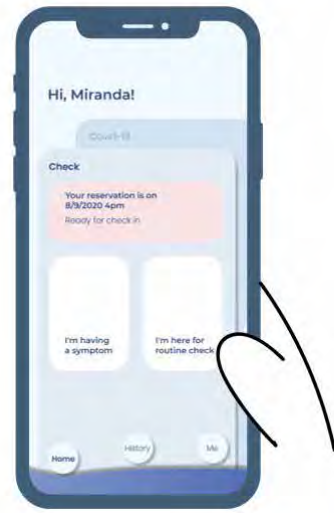

Next Day...

Treatment Day...

One day our dentist looks at the aero website and he notices that there are two products available to build a cleaner and safer clinic. He purchases the two products and then downloads the arrow portal. The first thing he does is to connect aero portal to the existing system. After he loads the patients list into the aero, he sends his patients a text message notifying them that this clinic has equipped with aero system.

Meanwhile our patient Miranda has toothache, but she's concerned about whether she should go to her dental clinic during this pandemic. Suddenly she received a text from her dentist telling that she can now consult with her dentist online. There is also a code to import import all her medical history and personal profile to the app. She clicks the link and downloads aero portal. She type in the code given from her dentist and import her medical history. After that, she chooses to consult with her dentist. She's asked to describe her illness and take a picture. During the process there are popup guidance on the screen to guide her to take a better picture. She has to go to the balcony where there are sunlight, and finally she submits a request to her dentist.

Next day, Dentist receives an aero tunnel. In the desktop app he can connect the product to the portal to better monitor the product's status. When he's installing the aero tunnel onto the center pole of the dental operator, there's a notification on his screen. He looks back at the notification, It's the patients' requests. He takes a look and writes down his feedback according to the description and pictures. He thinks that Miranda definitely needs to visit the clinic so he selects several of his available time slots.

Miranda has received dentist feedback, she also selects her available time slot and the appointment has already been scheduled. At this time she is required to take a COVID-19 questionnaire to make sure that she doesn't have any symptoms.

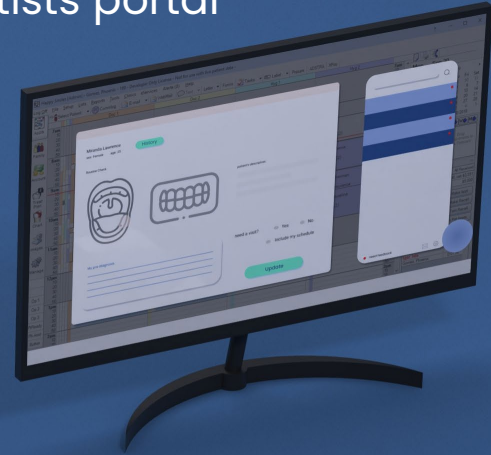

On the treatment day, Miranda is instructed to wait in the car. While she is waiting, she starts the check-in process, which involves a COVID-19 safety guidance and another questionnaire to further confirm that she doesn't have any symptoms. After she finishes the questionnaire, she takes a look at the real-time room status, it shows that room is being cleaned by the assistant. When her time is up, the app generates a code for her to show to the assistant. Miranda puts on her mask and goes to the clinic. She's stopped by an assistant, she's asked to show her check-in code, the assistant measures her body temperature and shows her the way in. She meets her dentist in the treatment room, she lies down and sees the dentist put on a brand-new shield onto the aero tunnel.

The dentist pulls the air intake closer and it starts working right away. During the treatment, they are not afraid of aerosol at all because the aero tunnel sucks in all the aerosol and the plastic shield acts as an extra physical barrier. When the treatment is finished, they all feel safe and secure. As Miranda goes out of the clinic to her car, she thinks that this is a really good dental experience, especially in this special time.

Development Strategies

- Short Term

- Promote to dental clinics: “aero system helps you get back on track.”
- Dental clinics connect to patients through aero portal.
- Promote to patients: “aero makes clinics get safer and cleaner.”

- Long Term

- Develop more attachment devices & connect to aero portal.
- Collaborate with dental equipment companies for more integrated solutions.

With *aero*, dental clinics can operate more efficiently and safely during pandemic by offering convenient communication and trustful service to patients.

Thank you

Team D: Sabrina Xu, Kexuan Dong, Emma Zhu, Michael Zhu
